On-Demand Inventory and Warehouse Management Solution
Positive ROI in less than 30 Days

About SmartTurn

SmartTurn is the leading Cloud-based Inventory and Warehouse Management System (WMS).

SmartTurn offers quick deployment, ease of integration with other systems, affordable functionalities, and high scalability that will address your unique business needs.

Try it – Like It – Subscribe

With Pay as you go Model based on number of warehouses, number of users and number of transactions per month.

Why choose us?

SmartTurn creates a centralized system that integrates inventory and warehouse management processes, which provide businesses with real-time visibility to inventory levels and higher control over the movement of inventory within one location as well as across different warehouses.

SmartTurn provides the level of flexibility and scalability that will help businesses adapt to the dynamic market forces and manage long-term planning.

SmartTurn also addresses secure information sharing, collaboration and Web 2.0 functionality driven by the Internet and supply chain best practices.

Our Customers

- Third-party Logistics Providers (3PL)
- Wholesale Distributors

SmartTurn WMS Features

Inbound Order Management
Control your spending through inbound order (purchasing) management.

Receiving Operations
Receive a shipment against an inbound order with one click. Enter blind receipts or automate receiving using mobile scanning devices.

Reporting
Generate inventory, shipping, putaway, picking, and other functional reports and easily share them with other interested internal or external parties. View stock-out reports when creating an order.

Item Master Setup
Create master records and rules for all products in your warehouse to streamline purchasing, receiving, and shipping and to reduce data entry.

Inventory Management
Easily adjust, edit, transfer and direct putaway of inventory items with dynamic location to maintain inventory accuracy and ensure your ability to ship to meet customer expectations.

Kits & Assemblies
Create and assemble kits with ease using kit specifications per item, customer, owner or warehouse (e.g., kit-to-order/stock, partial kit-orders, serial number tracking in a kit, unlimited bills of material).

Transaction History
Track each inventory item from receipt to shipment with key attributes (e.g., serial #'s, lot #'s, expiration dates, locations, receipt dates, shipping dates and custom fields). Track the status of document changes or inventory edits.

Picking
Pre-allocation allocates inventory before the product is picked. Pick/Pack module with BOL's pick tickets with separate pick and pack orders.

Mobile Computing
Provides key warehouse functions (e.g., receiving, picking, cycle counting, and shipping).

Shipping & Fulfillment
Manage fulfillment process with robust pick policies (e.g., FIFO, LIFO, FEFO, LEFO and custom pick policies) to meet your requirements. Dispatch orders, find alternate locations to pick from ensuring 100% fill rates, save shipments for later processing and void lines/entire shipments returning inventory back to stock.

System Configuration
Easily configure the flow of information by customizing hundreds of custom fields including field names, field placements, default data, page layouts, and informational business rules.

Data Import/ Export
Export inventory reports, shipment lists, and other functions to create reports in Excel, or PDF to share/email with others Import key data (e.g., item masters, customer and vendor masters) to cut data entry and streamline implementations and mass changes.

Real-time Inventory Visibility
View real-time inventory levels, create different reports, and export data to a spreadsheet for analysis.

PDF Printing
Create PDF documents for BOLs, packing slips, quality control slips, and shipping labels among others.

Administration
Easily administer the system from one place with intuitive screens for managing users, customers, vendors, security, master data and system configuration.

Web Services API
Improve efficiency in the processes of managing orders, receipts, shipments, inventory, adjustment and bin transfer.

Multi-Warehouse Management
Centralize visibility and standardize management of business processes across multiple locations, sites and warehouses.

Warehouse Billing
Allow 3PL to bill their clients based on their onsite inventory and handling activities.

Integration
Integrate to a variety of applications that support Web services or .NET XML protocols.

Email Shipment Notification Alerts
Share shipment notifications to related parties via email.

Inventory Allocation
Improve the prioritization of shipments based on inventory levels on hand.

Import Sales Orders in CSV format
Reduce manual effort by uploading multiple sales orders in csv file format.
