Connected Buildings: Boost Your Business with Honeywell Mobile Apps

Connectivity is transforming buildings and bringing Internet of Things (IoT) concepts to life, driving broader organizational benefits, from maximizing building efficiency to increasing occupant experiences.

Honeywell mobile apps are helping drive this transformation, allowing building owners and facility managers to tap into building

hyperconnectivity to enable advanced data capture and analysis for faster risk detection and instant access to critical building information. With this connectivity, mobile apps are helping initiate actions that create safer and more comfortable, efficient and interactive facilities.

Introducing Honeywell Pulse for Connected Buildings

Honeywell Pulse for Connected Buildings is a mobile app that connects facility managers, supervisors and engineering staff to buildings and the equipment within it, enabling real-time performance tracking to ensure buildings continue operating at an optimal level.

The Pulse app provides customized, real-time facility performance notifications — anytime, anywhere—and keeps key personnel connected to their business. It provides near real-time data visualization, speeds response time, improves situational awareness and reduces the impact of critical incidents through increased collaboration.

Take Charge and Stay in Control

By driving accountability, enabling collaboration and visualizing historic data, the Pulse app facilitates timely and efficient outcomes that positively impact facility productivity. Facility personnel can stay connected to a building's performance by harnessing the power of connectivity to:

Raise situational awareness – Forward, share and receive critical alarms and events in near real-time, and initiate rapid response for faster decision making.

Harness the power of connected collaboration – Tap the collective brain power of others within an organization, collaborating with subject matter experts and enlisting the help of others as needed to quickly address and resolve a situation.

Stay alert and informed – Receive customized alerts and timely notifications from multiple data sources leveraging existing Honeywell software.

Maximize building performance – Proactively seek and analyze trends and conditions to optimize performance.

Connect To Better Building Outcomes

Honeywell Pulse for Connected Buildings is part of Honeywell's growing Connected Services portfolio, which leverages the connectivity of buildings to improve how they operate and the experiences they offer for those who visit and work within them. The Honeywell Connected Services portfolio — which draws from the collective power of Internet of Things (IoT) technologies, cloud applications and the deep domain expertise of Honeywell's service engineers — also includes the Honeywell Vector Occupant app for improving occupant experiences, and Honeywell Outcome Based Service, which uses real-time data and analytics to help focus maintenance activities for optimal facility performance.

Tap into increased performance with Honeywell Pulse for Connected Buildings.
