# The next generation of Microsoft PivotViewer

It's great how my brand is seen in social media. I'd love to get an overview on a page...

Since the launch of Microsoft PivotViewer in 2009 it has gained a legion of fans around the world, using both the standard and Silverlight/HTML5 versions in a plethora of applications.
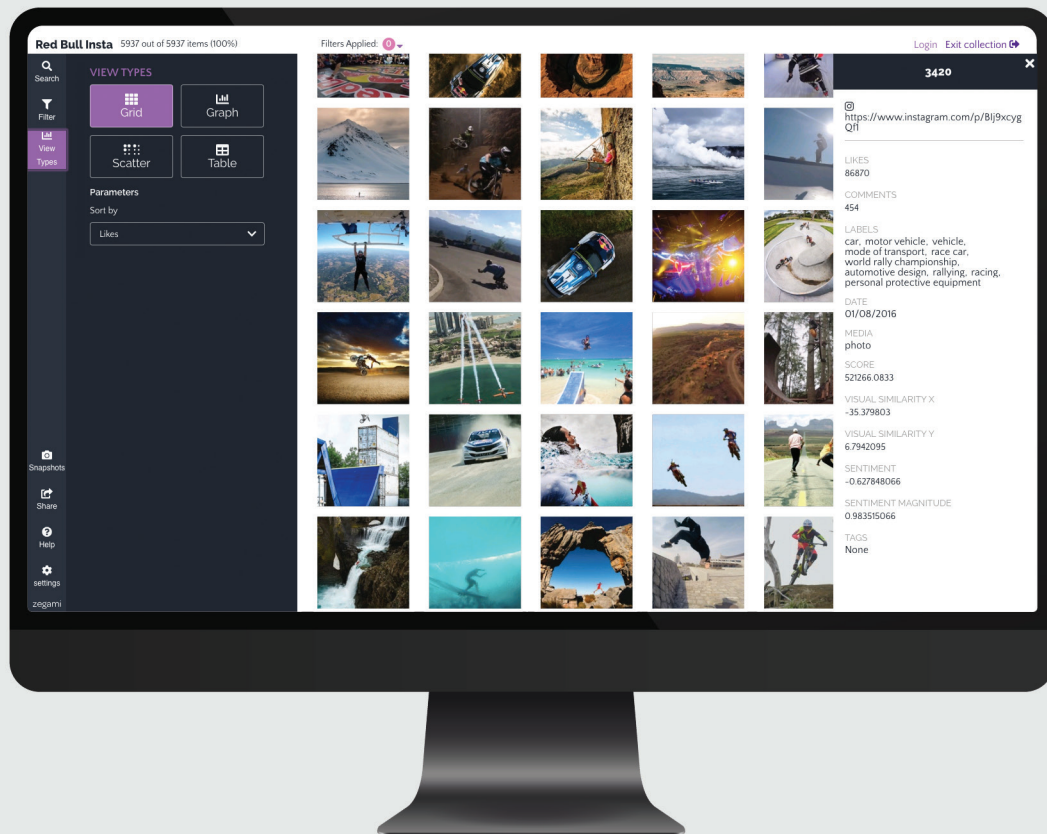

Organisations have embraced PivotViewer for a wide range of uses – from managing work orders to insurance cases, and people management to visual assets. In fact, any situation with a wide range of structured and unstructured data, including images.

Inspired by that, we developed Zegami in 2016, as a significant step forward for PivotViewer and the way that images are handled. We've taken something that was historically a developers tool to build applications with, and turned it into a packaged, deployable solution available on any device. Zegami is not only far more feature complete, it takes care of generating and managing very large collections of images (no more Excel plug-in!).

...to get insight into how these images create sentiment which contributes to brand growth...

zegami

www.zegami.com

...and see the impact each image has, and what's driving it.

Scale:
Display tens of thousands of images to give an overview, and the ability to drill down to a single point

Multi-platform:
Multi device support – all modern browsers and devices, to flexibly access your data

Multi-views:
Grouping, Map and Scatter-plot Filters so you can easily discover patterns and insights

Secure:
Robust security model to control who can access a collection, in the cloud and on premise including corporate account single sign-on

Curate:
Ease of collection generation within the administration portal, without involvement of other parties, or technical 'know how'

Integration:
Plug-in API that allows for the development of new functions and features, backed with consultancy support from Zegami

Given that Microsoft no longer supports PivotViewer, Zegami is the natural successor. We can help with training your team, guidance on technology and on your implementation.
