Spider

Use Spider to communicate with external systems and achieve seamless integration.

Do you manage sales and customers in more than one system? Do you get frustrated when these systems are out of sync? Spider does not only provide the necessary interfaces to be able to communicate with external systems but also keeps track of what have been changed in Dynamics 365 Business Central. All changes are logged and made available for external systems to fetch. This makes your systems work together in synchronization!

SPIDER consists of:
– Web services for communication
– Change log for conditional incremental synchronization
– Quickstart Guide
– Extra fields to use for conditioning and categorizing of entities
