MAXLife Digital Platform:
Helping Life Sciences Transform Lives

MAXLife

MAXLife extends the core functionality of the Microsoft Dynamics 365 for Operations application and has been a leading ERP solution for FDA regulated companies since its launch in 2009.

MAXLife is different than traditional Life Sciences ERP systems because it is:

- ☑ A true enterprise solution without the price tags of Oracle and SAP.

- ☑ More robust and integrated than smaller scale or niche ERP systems.

- ☑ Extensible and scalable – accommodating the complexities of commercialization, high growth, M&As, or global expansion.

- ☑ Built to help regulated organizations consistently meet the highest standards for quality.

- ☑ Validation ready and able to be rapidly deployed with less risk and a higher ROI.

MAXLife enables companies to transform without the high costs and complexities of traditional ERP and process improvement projects.

"Merit has met or exceeded every requirement levied by industry regulators and our own internal Quality and Regulatory staff...We were very impressed with the quality of the advice Merit consultants gave us starting from day one of the engagement, and even more impressed with the results after we followed their guidance."

Erik Nelson, VP of IT
Volcano Corporation
