

# CloudDeploy for Windows direct to your Devices

Cloud-hosted – Direct to end-user – Real-time tracking

## CloudDeploy Overview

CloudDeploy is brought to you by the SOE Portal. Design your Windows 10 corporate standard build using our easy-to-use wizard-driven interface. Select from our extensive library of hardware models and common applications, and integrate your line-of-business or custom applications.

Our system automates your custom Windows build which can then be deployed direct to your devices using CloudDeploy.

Imagine deploying your custom Windows build direct from the cloud to your end-user devices.

Imagine no more. With CloudDeploy, you can provision your end-user devices no matter where they are at any time.

## Features

**On-demand:** pay only for what you use. Our attractive pricing means you only pay when you deploy a device.

**Self-service:** you are in control. Simply use CloudBoot and provision any device whether bare metal or pre-deployed.

**Configuration:** select from settings to customise how your deployments will be delivered.

**Fast, automated:** no need to wait weeks or months for infrastructure to be set up or a

custom Windows build to be ready. Start your build and deploy the same day!

**Deploy anywhere:** deploy Windows to your devices whether they are on-premises or remote.

## What do I get?

**SOE Portal subscription:** design, configure and automate your custom Windows build in the SOE Portal, immediately ready for provisioning devices with CloudDeploy.

**CloudDeploy Direct:** deploy Windows to your devices direct from the cloud without the need for any infrastructure.

**CloudDeploy On-Prem:** optionally configure a single or hierarchy of CloudDeploy LocalStore servers to cache and deliver content to your devices.

**Real-time deployment tracking:** track the real-time progress of all your deployments through our web console.

**Other deployment options:** your Windows build can be easily factory integrated straight from our portal, deployed direct to your end-users with CloudDeploy, or downloaded and deployed with removable media (e.g. CD/DVD, USB) or over your network using PXE.

## Is it for me?

- Are you looking to deploy Windows 10, or get the management of versioning under control?
- Do you want to reduce the need for on-premises infrastructure?
- Do you want to track your deployments and their progress in real-time?
- Do you want a Windows build that can be designed, built and deployed with minimal effort?

## Details

SOE Portal will save your business money. Compared to current day practices, resource effort and associated Windows lifecycle costs are drastically reduced, providing real year-on-year dollar savings to your bottom line.

Dedicated infrastructure is not required, providing savings on hardware and associated support and licensing costs. Expensive or dedicated skilled resources can have their time freed to focus on less mundane tasks. The savings are endless.

## impeltec info

impeltec focuses on offering Windows®-based SOE (Standard Operating Environment) build services for end-user computing, as well as complementary services such as application packaging, deployment consulting, and systems management. We have a strong focus on the cloud, with extensive experience and expertise in Microsoft Azure™, Office 365™ and Microsoft Intune™.
