

CONTROL THE CHAOS

Modernize your enterprise with a cloud-based digital operations management platform.

The OpsRamp digital operations management platform helps today's hybrid enterprises monitor, manage, and consolidate their IT infrastructure, point tools, and applications. Now, enterprise IT teams everywhere can discover and monitor across hybrid environments, manage business-critical services, and optimize service delivery and performance through, AIOps, automation, and integration with ITSM and DevOps tools.

STOP MANAGING INFRASTRUCTURE. START DELIVERING VALUE.

Today's IT landscape is more complex than ever, with hybrid, multi-cloud and cloud native infrastructure, point tool overload, and DevOps demands. How can modern, digital operations teams ensure excellent digital customer experiences and reliable IT services? The OpsRamp platform offers real value for IT operations teams bogged down with too many tools, shadow IT and escalating cost pressures.

100%

visibility across infrastructure

48%

reduction in mean time to detect and resolve (MTTD and MTTR)

53%

savings annually over the cost of maintaining siloed point tools

Be the First to Know

OpsRamp auto-discovers multi-cloud and on-premise infrastructure across your IT environment and maps it to your IT services.

Take Action Faster and with Context

OpsQ, our AIOps event management engine, drives faster incident resolution and helps reduce MTTD/MTTR of business-critical services.

Deliver IT Operations as a Service

Automate workloads, manage multi-cloud costs and see your IT operations become more efficient over time. All from one platform. All across the enterprise.

A SOLUTION FOR EVERY PROBLEM

Simply choose the path that's right for you:

Modern Infrastructure Monitoring: End-to-end visibility across applications, datacenters, public clouds, point tools, and anything else you've got under the hood.

Intelligent Incident Management: Drive better problem identification, impact analysis, and first response for incidents with a streamlined process for proactive resolution and automated remediation that natively integrates with your ITSM tools.

Service-Centric AIOps: Clinically examine your incidents, reduce alert floods, establish a tight feedback loop between your different teams, and deliver quick resolution using OpsQ, our artificial intelligence-powered event management engine.

Cloud Migration: OpsRamp is a true multi-tenant, multi-tier SaaS platform that helps simplify the management of complex hybrid IT environments - helping you move more workloads and applications to the cloud faster.

Modern IT Operations Management: Replace your legacy tool suites and consolidate your multiple point tools with a modern, SaaS-based IT operations platform that combines artificial intelligence, hybrid infrastructure monitoring, service and topology mapping, and incident remediation, and evolves with your business.

ALL INTEGRATIONS WELCOME

Don't give up the tools you love. Whether it's Atlassian, ServiceNow, New Relic or Puppet, the OpsRamp platform can consolidate them all into one, contextual view of the metrics that matter.
