This application is only available in French.

Do you know exactly today the volume of your stock? Are your season campaigns effective? Are your business performance impacted by the inaccuracy of your data?

Cap Vignes offers you the chance to save time and simplify your process by becoming the essential management tool for your winery. Whether you are a winemaker or a reseller, the problem of stock management is paramount and raises important issues, including productivity but also customer loyalty. Whether by vintage or appellation classification, research in your inventory must be fast and accurate to provide a reliable answer in real time to your customer.

In addition, the wine world obeys strict customs constraints such as flow traceability or DRM (monthly summary statement). Entering these regulations can be tedious and must be simplified to make your daily life easier.

Cap Vignes, with Microsoft technology, allows you to manage all your business processes.

Control your bottling, simplify your Gamma remote declaration, enjoy multi-payments to order and administer your early, traditional and vault sales orders.

Do not waste your time navigating between different software or entering the same information multiple times. Simplify your logistics by managing your wine reclassification and your packing. Adopt Cap Vignes, the business management solution for wine professionals.

The advantages of the solution

- Analyze your stocks of bottles and capsules in real time
- Save time on your entries
- Simplify your DRM and Gamma remote procedures
- Diversify your sales channels
- Manage your early campaigns
- Control your bottling
- Manage your wine reclassification and packing

The features of the solution

- Customs control (DRM, DAE, gamma remote procedure)
- Production (bottling, capsule management)
- Logistics (labeling, packing)
- Sales in vault, early or traditional

Accompany the development of your winery and bet on the future by choosing Cap Vignes.

Supported editions
