WorkshopPLUS - Microsoft Azure: Azure Monitor Introduction 1 day

WorkshopPLUS

Focus Area: Operations and Monitoring

Duration: 1 day

Difficulty: 100-Intermediate

Overview

Azure Monitor provides sophisticated tools for collecting and analysing telemetry. That allows you to maximize the performance and availability of your cloud and on-premises resources and applications. The course provides a technical drill-down into log analytics, data sources, search query language, security and compliance, and authoring for Log Analytics.

Objectives

After completing this training, students will be able to:

- Understand Azure Monitor data stores and components
- Understand Logs and Metrics
- Work with Insights in Azure Monitor
- Learn how use alerts to respond to events and triggers actions
- Understand how use, render, and share graph into Azure Portal
- Interact with other Azure services and on-premise software

Key Takeaways

Course Material

- Overview of Azure Monitor
- Most of the concepts covered above will be supported by hands-on demos.

Agenda

- Azure Monitor Overview
- Monitoring data platform - Connected sources
- Azure Monitor Insights
- Analyze and Respond
- Visualization with Azure Monitor
- Managing and Integrating Azure Monitor
- Authoring for Azure Monitor

Recommended Qualifications

This course is designed for IT staff who have designed, deployed, administers, or manages an Azure environment. To ensure that Students are successful at the end of this WorkshopPLUS, it is highly recommended they meet the following criteria:

- Basic knowledge of the Microsoft Azure platform.
