

Better data better care

WWW.BETTER.CARE

Better transforms healthcare organisations with their market-leading **open data platform** putting **organisations in control** of their data, workflows and transformation plans in order to make patients' care better.

But that's only part of the story, boilerplate IT won't cut it anymore. We build personalized digital applications that fit into the day of the life of stretched professionals. From our intuitive **OPENeP medication management application** and **clinical portal to shared electronic health record for nations**, we believe that great design combined with secure sharing of that data as the future of healthcare.

The Better platform already securely supports over **22 million patients** over 500+ hospitals across 15 countries worldwide and we are rapidly growing.

However, we don't believe we should do this alone. That is why we fully embrace the open culture and **international openEHR standard** enabling health technology companies that share our ethos and direction to create a collaborative ecosystem that truly meets the rapidly evolving needs of patients and clinicians.
