Netways Risk Control

Distributed and fast risk assessment and governance

Allow any organization to manage their risks by distributing risk factors collection across the various stakeholders. The aggregated results can identify potential risks to switch to different mitigation stages.

Why Use this App

- Collect Indicators
- Distribute the Collection Process
- Aggregate Results
- Control Data Entry by Enforcing Field Value Rules
- Auto Mitigation Stages Switching

Overview of History

- Check previous entries
- Generate reports

Identify Risk Areas

- By having min/max rules
- By analyzing shift in trends

Increase Control

- Real time visibility on potential risks
- Control a distributed data entry process
- Execute mitigation plans based on aggregated results
