

DATASHEET

Sublot Management

What makes the food industry so unique that it requires special solutions? The wide variety of available and possible attributes per product calls for specific solutions that will work for you and your company. Aptean Food & Beverage understands the issue and supports it by adding sublot functionality to Microsoft Dynamics 365 Business Central.

Maintain control over your lot numbers

With Sublot Management, you are able to handle a very common, food industry-specific, scenario. No two food items are exactly the same, even within the same batch or lot number. With this app, we help you to cope with these variations, making sure tracking and tracing remain in place, while the goods are handled correctly within your company. Extend the functionality with Advanced Attributes, optional and sold separately, to register the attributes that make this specific lot number different from the original.

Manage quality differences within a single lot number

Sublot Management allows you to create sublots. From the original lot, just enter a quantity and user-configurable reason code, and we handle everything else. For this action, we rely on the Microsoft Dynamics 365 Business Central journals, meaning all your entries are processed as expected, and the history is always available.

One single entry point for your lot info

All lot number related apps available from Aptean Food & Beverage are available on the lot number information card. With seamless integration, it's a convenient process for the user independent of whether it is creating a sublot or changing the inspection status of the expiration date.

Full history available

Do you want to track the history of your lot number? We've added the subplot history on the Lot Information card. In a single overview, it is visible what sublots have been created and what the origin of each subplot is. Based on the reason codes you've set up, you are able to monitor and report back on your process internally, as well as evaluate your vendor's performance on quality.

Features and benefits

- Manage differentiation within a single lot number
- A single action generates a new lot number
- Seamless integration with Foodware 365 Advanced Attributes
- Full history and tracking available
- Get a direct update of the newly created subplot location
- Split articles within the same lot and automatically create a new lot number

Foodware 365 is part of the Aptean family of mission-critical, industry-specific software solutions. Aptean's purpose-built ERP and supply chain management solutions help address the unique challenges facing process and discrete manufacturers, distributors, and other focused organizations. Aptean's compliance solutions are built for companies serving specific markets such as finance, healthcare, biotech and pharmaceuticals. Over 2,500 organizations in more than 20 industries across 54 countries trust Aptean's solutions at their core to assist with running their operations.
