

Rhino Bank

Rhino Bank is an end to end solution that will streamline your Client's interactions and will increase client's knowledge to deliver a memorable customer experience. Built on Microsoft's common data model Banking accelerator, developed on Dynamics 365, Microsoft Power Platform and Azure.

Design with Industry Best practices, this powerful Workflow & rules engine, includes build in turnkey solutions to choose from based on your business priority needs. Examples of these already built as Apps are Digital On-Boarding, Loan Origination, Collections, Credit Scoring, Advisory services among others.

The solution will gather all the information from your data, channels client's activity and business process Apps. Machine learning connected to the Microsoft Banking accelerator for the Common Data Model will feed the information to Pre-configured prescriptive models to uncover cross selling opportunities and Customer Churn

This will help you know more about your market and Clients. You will create interactions that are both meaningful and valuable. Rhino Bank is built on Microsoft's Banking Accelerator for the Common Data Model that will help you classify your transactional data to identify Client wants, needs, preferences, and priorities to meet their financial goals.

You will be able to orchestrate customer journeys based on prospect preferences and needs. Regardless of a push or pull strategy, you will create seamless experiences that increase lead generation to attract the right prospect and Client satisfaction. You will engage with the right message at the right channel.

We will help financial institutions uncover the best next conversation or best next action with Clients. Rhino Bank will identify the right opportunities to focus on.
