

# CRUX

## Data delivery, simplified.

Get the data you need, how you need it, where you need it.

Crux is a data delivery and operations platform that provides immediate access to thousands of datasets via a central cloud-based access hub. Crux operates data pipelines at scale, delivering datasets in multiple formats through flexible delivery methods.

Connect to Crux **once** and a growing library of data is at your fingertips!

### Benefit Highlights

- **Thousands of active datasets from 80+ sources** available today, with new ones added every day
- **24x7 data operations and support team**, ensuring data is flowing at scale and without inconsistencies
- **Trial and onboard new datasets faster**, by connecting to ready-made pipelines
- **Notification service** to let you know programmatically when new data arrives or any service changes
- **Flexible delivery methods**, including cloud storage and warehouses
- **Metadata explorer** application for all your datasets
- **Data stored in a standard point-in-time format** so that history is always available

### Deliver via flexible methods to suit your needs

Fast track data delivery to your destination of choice via various delivery options, including:

- **On-Demand:** API | SQL | ODBC | FTP
- **Cloud Platforms:** Amazon S3 | Snowflake | Google Cloud (2Q'20) | Microsoft Azure (2Q'20)

### Complements your existing data licenses

Crux charges a low monthly fee to reliably get the data from the data supplier to you. Our data operations team works directly with suppliers to remediate delivery issues on your behalf.

Access to datasets is governed by your license agreement(s) with the vendor(s); Crux does not disintermediate your existing vendor relationships.
