- Gather data from Legacy systems

## Invoice Processing

Zap Automation automatically processes invoices once received. It can automate the data input, reconciliation error, and even it can process certain decision-making required for invoice processing, which minimizes the need for human intervention. It can automate end-to-end process from receipt to payment.

## Sales Orders

Sales representative need to spend their critical time in entering data to the CRM system as well as the ERP system. Zap Automation can perform these activities end-to-end by automating tasks such as sales order entry, invoicing, etc. It will help to maintain a database by removing duplicate data.

## Payroll

Zap Automation can perform automation for payroll related transactions from end-to-end to avoid inaccuracies and delays. It can also verify employee data consistency across multiple systems, validate timesheets, load earning and deductions. It can also automate paycheck creations, administer benefits, and reimbursements.

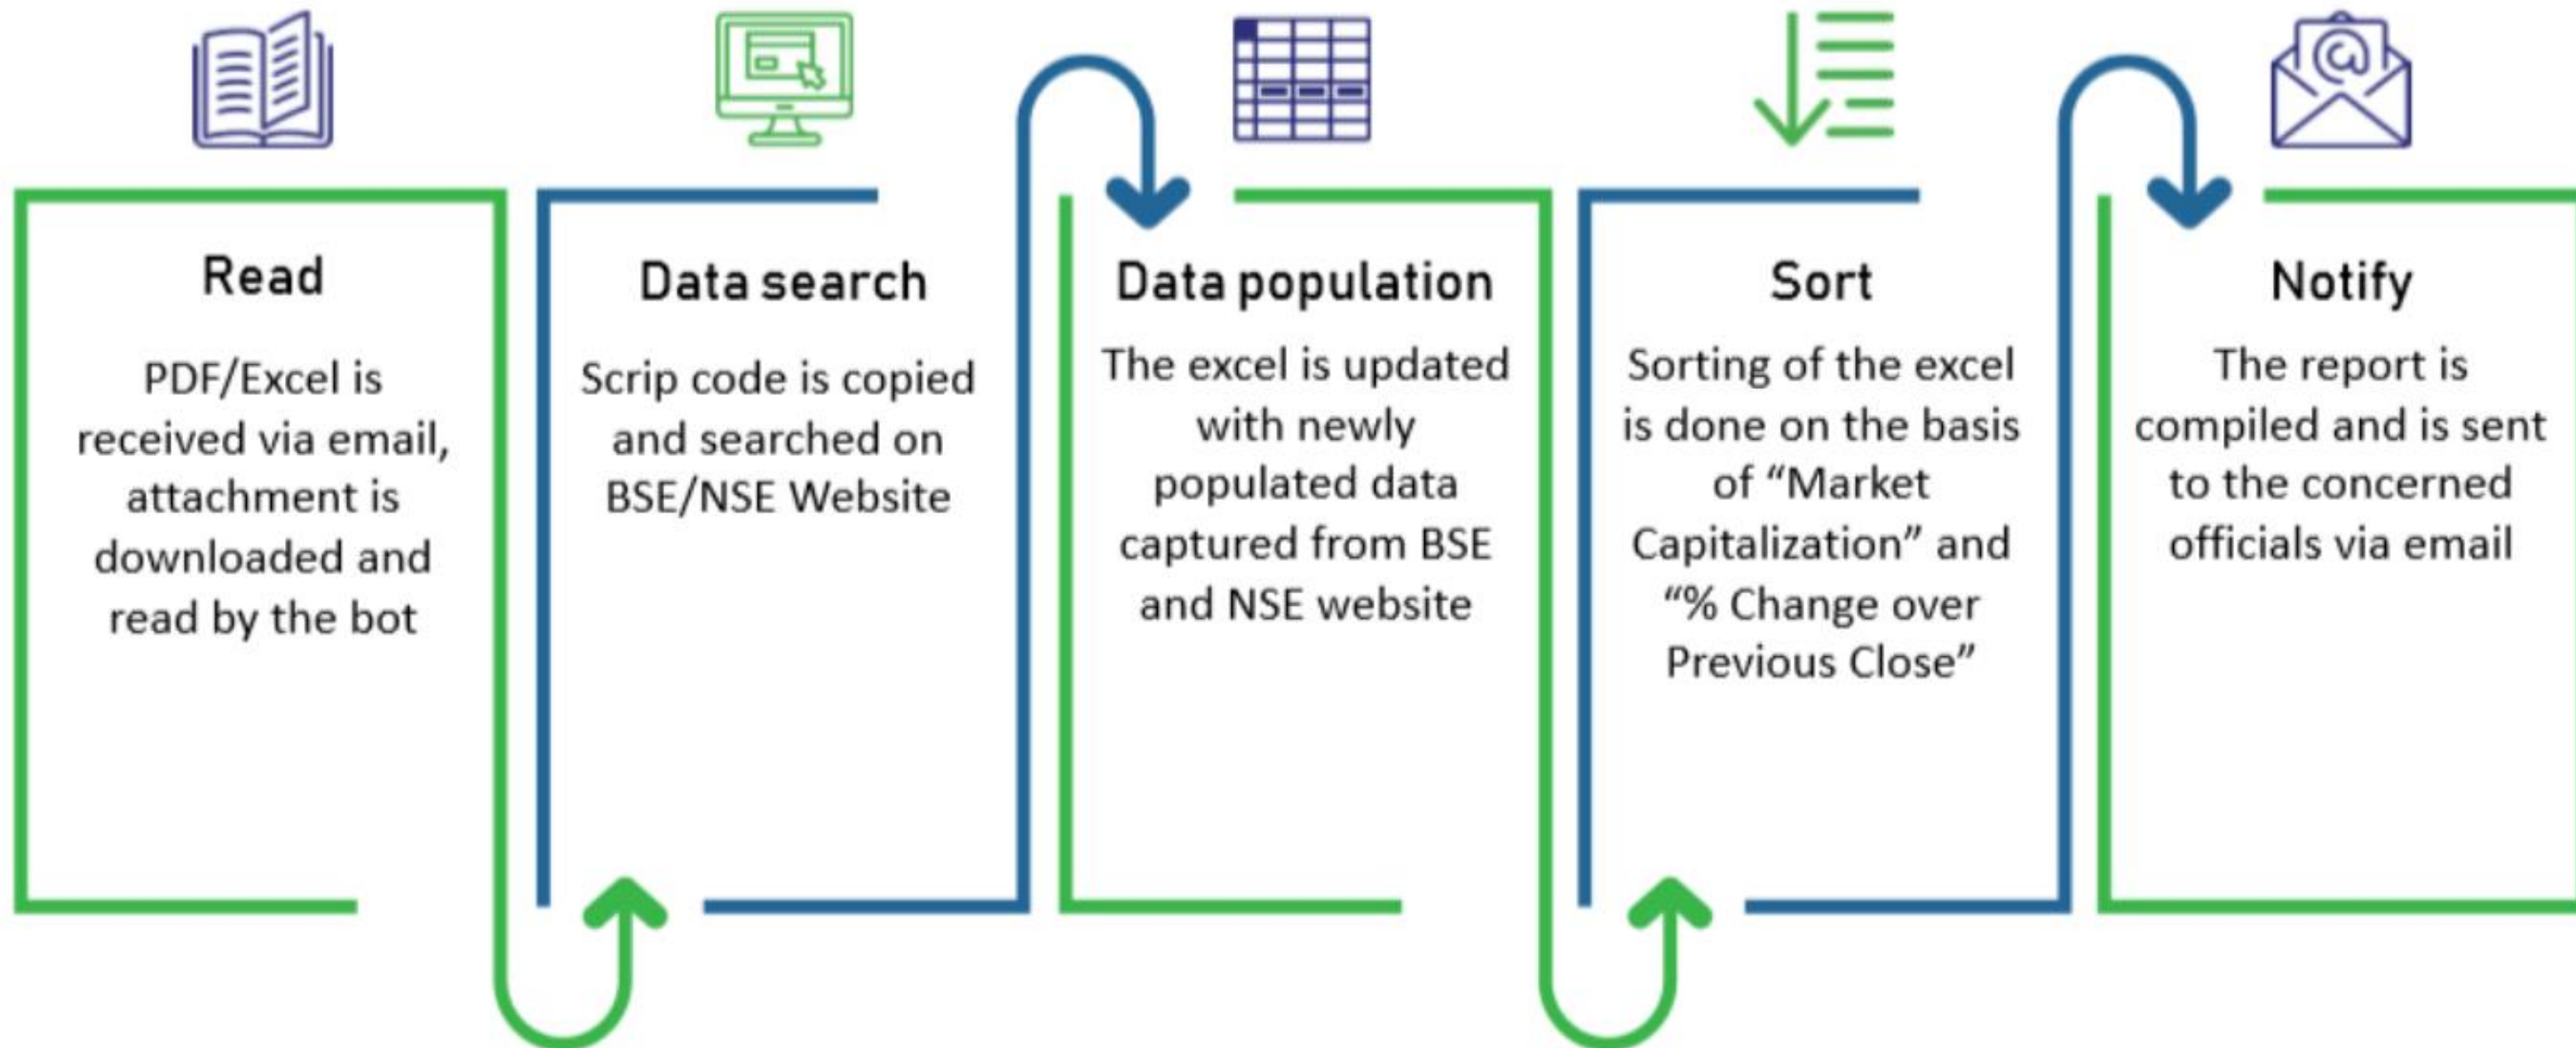

## IT Support

Zap Automation can automate various complex system administration tasks around IT applications and infrastructure, such as regular diagnostics of systems and fault remediation where automations can complete the required steps saving users time while reducing burden of support teams.

## Claims processing

Zap Automation takes in unstructured data in forms, extract structured data and process claims based on pre-defined rules. This approach takes care of all major issues with manual claims processing.

# End to End Automation Example (Market Report)

## Automated Processes

- Automate up to 70% of manual business processes in your organisation
- Save more than 30% on your operational costs

## Advanced Analytics

- Generate process discovery map for the entire organisation to increase processing time by 90%
- Gather data on Compliance and Audit reports on the processes performed by the employees

## Increased Employee Capacity

- Free up more than 50% of staff time and allocate it to strategic and customer service tasks
- Retrain employees to be ready for the fourth industrial revolution

## Greater Compliance and Reduced Risk

- Automated processes perform all the required steps as per the rules delivering 100% compliance
- Lower risk and reduced human errors with automated processes
