

Stripe Payment Gateway Support Document

1. Login to Stripe Payment Gateway:

Enter the Following URL <https://dashboard.stripe.com/register> on your browser.

Complete the Registration using the form given to create your Stripe Account.

The screenshot shows the Stripe registration page. On the left, the Stripe logo is displayed above three bullet points: 'Quick and free sign-up' (Enter your email address to create an account), 'Simple integration' (Use Stripe's API or pick an app), and 'Start accepting payments' (Try the sandbox or just go live in minutes). The main form area is titled 'Create your Stripe account now' and contains the following fields: 'Email', 'Full name', 'Password', and 'Confirm password'. Below these fields is a reCAPTCHA section with the text 'I'm not a robot' and a checkbox. At the bottom of the form is a blue button labeled 'Create your Stripe account'. Below the form, there is a link: 'Already have an account? Sign in.'

Get the API keys to integrate the system with Gateway by clicking on “Get Your Test API Keys” on the Dashboard.

There are 2 keys present in this section:

1. Publishable Key: This is the Key which would be used in JavaScript
2. Secret Key: This is the key which would be used only in the server-side code

Now Create and Set up the Product

Click on Products in Left Hand Navigation Pane

Inventory

[+ Add SKU](#)

> sku_G7YNVehBCMxJgW	ACTIVE	test1	Delete	Edit
> sku_G7YMrN3j5TMskS	ACTIVE	test	Delete	Edit

You shall have to create the SKU for all the payment amount you wish to accept the payment for. We can help you to create multiple SKU at once by using a custom code.

```
POST /v1/skus Select library ↕ | ↗ | 📄
1 $ curl https://api.stripe.com/v1/skus \
2 -u sk_test_S38JYwj77skv3wjS67hGMcQ200Za5gx0dU: \
3 -d "attributes[size]=Medium" \
4 -d "attributes[gender]=Unisex" \
5 -d price=1500 \
6 -d currency=cad \
7 -d "inventory[type]=finite" \
8 -d "inventory[quantity]=500" \
9 -d product=prod_G7Y5MKJmVKBG6F
```

Once the SKU is created, you just need to paste the following code on your website in order to integrate the Stripe payment gateway to your website:

```
<html>
<!-- Load Stripe.js on your website. -->
<head>
  <script src="https://js.stripe.com/v3"></script>

  <!-- Create a button that your customers click to complete their purchase. Customize
the styling to suit your branding. -->
  <meta>
  <meta>
</head>
<body dir="LTR" onfocusout="parent.setEmailRange();" lang="en-US" style="overflow-wrap:
break-word;">

  <button style="background-color:#6772E5;color:#FFF;padding:8px 12px;border:0;border-
radius:4px;font-size:1em" id="checkout-button-sku_Fyl4YJH7pzQSXI" role="link">
    Checkout
  </button>

  <div id="error-message"></div>

  <script>
    (function () {
      //Your Stripe Account key goes here
      var stripe = Stripe('pk_test_gmJWNvkFMpeghv0neQ1aGGqA00zImd3WMh');
      var checkoutButton = document.getElementById('checkout-button-
sku_Fyl4YJH7pzQSXI');
      //change the SKU as per your product SKU
      checkoutButton.addEventListener('click', function () {
        // When the customer clicks on the button, redirect
        // them to Checkout.
        stripe.redirectToCheckout({
          items: [{ sku: 'sku_Fyl4YJH7pzQSXI', quantity: 1 }],

          // Do not rely on the redirect to the successUrl for fulfilling
          // purchases, customers may not always reach the success_url after
          // a successful payment.
          // Instead use one of the strategies described in
          // https://stripe.com/docs/payments/checkout/fulfillment
          successUrl: 'https://your-website.com/success',
          cancelUrl: 'https://your-website.com/canceled',
        })
        .then(function (result) {
          if (result.error) {
            // If `redirectToCheckout` fails due to a browser or network
            // error, display the localized error message to your
customer.

            var displayError = document.getElementById('error-message');
            displayError.textContent = result.error.message;
```

```
});  
});  
});  
</script>  
</body>  
</html>
```
