INTRODUCTION

The COVID-19 pandemic has created new challenges for businesses, especially if they have a large workforce. In the event of large scale crises, including natural disasters, pandemics, and sociopolitical unrest, organizations must be prepared to address employee concerns, track their status, and share vital information:

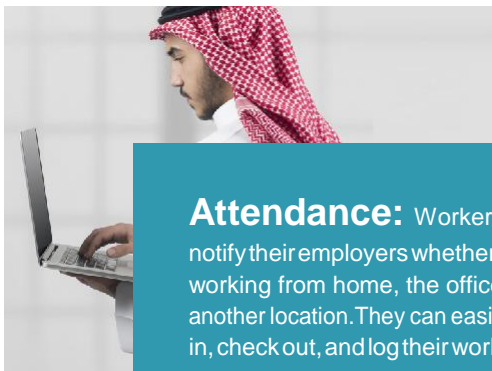

- How will you track employees' contact information, location, and travel history?
- Does your team have access to trustworthy information about the crisis from any device?
- How will you notify your team of critical business updates?
- Are you able to track attendance for your large, distributed team of remote workers?
- Can your employees access your company help desk?

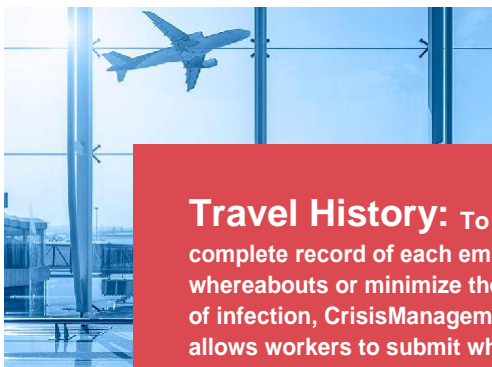

Your business needs a single digital tool that simplifies communication with its workforce during times of crisis. An ideal solution should facilitate employee tracking and act as a central source of updates on the crisis and its impact on business operations.

A UNIFIED SOLUTION FOR CRISIS MANAGEMENT

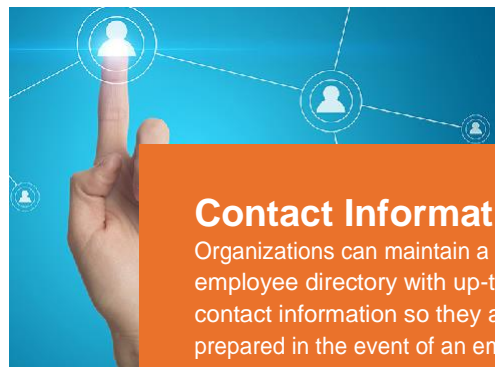

Built using Microsoft Power Platform, Crisis Management App by Techvista enables organizations to minimize the disruption caused by extenuating circumstances. The app is integrated with users' Microsoft Office 365 accounts, providing a convenient way for them to let their employer know about their situation and receive updates as the crisis evolves. The app is also available from any Internet-connected mobile device, making it perfect for situations in which a desktop or laptop computer might not be available.

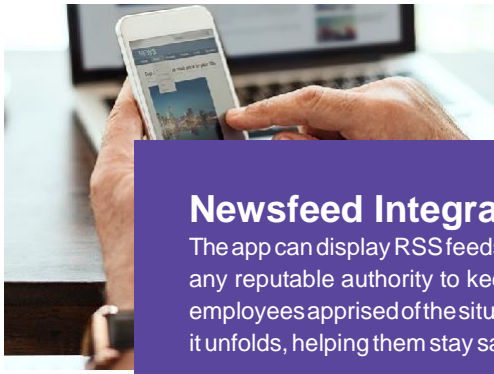

Attendance: Workers can notify their employers whether they're working from home, the office, or another location. They can easily check in, check out, and log their work hours.

Travel History: To keep a complete record of each employee's whereabouts or minimize the spread of infection, Crisis Management App allows workers to submit when and where they have traveled domestically and internationally.

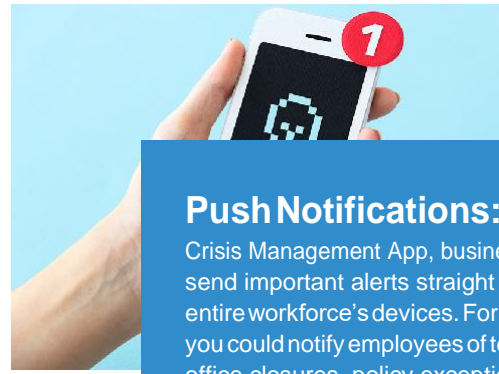

Contact Information: Organizations can maintain a complete employee directory with up-to-date contact information so they are prepared in the event of an emergency.

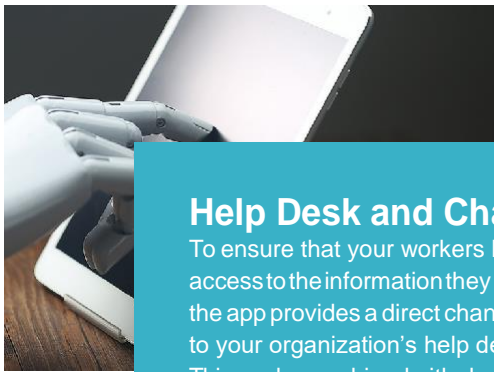

Newsfeed Integration:

The app can display RSS feeds from any reputable authority to keep your employees apprised of the situation as it unfolds, helping them stay safe.

Push Notifications: Using the Crisis Management App, businesses can send important alerts straight to their entire workforce's devices. For example, you could notify employees of temporary office closures, policy exceptions, or special facilities you're offering during the crisis.

Help Desk and Chatbots:

To ensure that your workers have access to the information they need, the app provides a direct channel to your organization's help desk. This can be combined with chatbots that intelligently respond to users' questions and provide important information on demand.

Multi-Device Access:

The Crisis Management App helps your personnel even when they don't have access to a desktop or laptop computer. Users also have access to the app from their smartphones to keep them informed and connected in a broader range of situations.

Choose Techvista's **Crisis Management App** to track the status of your remote workers and keep them informed of important changes.
