

Using the Microsoft 365 roadmap

This guide defines filters on the Microsoft 365 roadmap to help you interpret the data and provides information on how to share, follow, download, and provide feedback.

Overview

With dozens of apps and features, it can be challenging to keep up with what's new and what's coming soon.

That's where the Microsoft 365 roadmap comes in.

The roadmap is the central location for IT professionals, business decision makers, and anyone else who's interested, to see what's coming.

It was created to help you plan, communicate changes, and take full advantage of your Microsoft 365 subscription.

Search

Find features by typing in a product, keyword, or feature ID into the search bar.

Search tips:

- The best way to find a specific feature is to search by its ID
- Tags can be used in search and are also filter options
- Keywords, such as "PowerShell", that might be found in the description can be used in search

The screenshot shows the Microsoft 365 Roadmap search results page. At the top, there is a navigation bar with the Microsoft logo, 'Microsoft 365', and links for 'Products', 'Resources', 'Support', and 'Buy now'. Below the navigation bar is a hero section with the title 'Microsoft 365 roadmap' and a sub-headline: 'Get the latest updates on our best-in-class productivity apps and intelligent cloud services. Rethink productivity, streamline business processes, and protect your business with Microsoft 365.' There are three buttons: 'Using this roadmap', 'Roadmap improvements', and 'See last added'. Below the hero section is a search bar with the placeholder text 'Search for a product, release or specific update'. Below the search bar is a filter section with the text 'Filters' and 'Showing 802 updates¹'. There are three filter options: 'In development' (checked), 'Rolling out' (unchecked), and 'Launched' (unchecked). Below the filter section is a list of search results. The first result is 'SharePoint: Enable modern communication site experience on classic sites'. Below the title is a description: 'Using PowerShell, admins can now enable the modern communication site experience on any classic team site, including the root site.' Below the description is a 'More info' section. The 'More info' section contains the following information: 'Feature ID: 65224', 'Added to Roadmap: 3/1/2019', 'Last Modified: 7/2/2020', and 'Tags: General Availability, Targeted Release (Entire Organization), All environments, GCC High, DoD, Germany, GCC, Worldwide (Standard Multi-Tenant), SharePoint, Education'.

Filters

Status

Each feature is assigned a status, which is updated over the lifecycle of the feature.

The statuses of "In development," "Rolling out," and "Launched" can be selected above the features.

Showing 882 updates¹: [Download](#) [Share](#) [RSS](#)

In development <input type="checkbox"/>	Rolling out <input type="checkbox"/>	Launched <input type="checkbox"/>	
310	194	378	
Description			
Status			
Tags			
Release			
SharePoint: Enable modern communication site experience on classic sites	Launched	SharePoint Education GCC Germany	July CY2020

Here's how we define each of these statuses:

Status	Description
In development	The feature is currently in development and testing, and is not available to customers
Rolling out	The feature is beginning to roll out to the <i>first</i> applicable customers and is not yet available to <i>all</i> applicable customers
Launched	The feature is available to all applicable customers

Filters

Product(s)

A list of products within Microsoft 365 is provided in alphabetical order.

If multiple products are selected, results will show any features tagged with product 1 OR product 2 and so on.

The screenshot shows a 'Filters' interface with a 'Products' list on the left and a table of updates on the right. The 'Products' list includes: Access, Azure Active Directory, Azure Information Protection, Bookings (checked), Compliance Score, Cortana, Delve, Excel (checked), Exchange, and Forms (checked). The table shows 31 updates, with 11 in development, 16 rolling out, and 4 launched. The first update is 'Power BI: Excel data types from Power BI'.
