ABOUT Recharge Manager

Recharge Manager is an Automated re-charge engine built on the Microsoft Dynamics 365 Finance and Operations platform to deliver the automatic re-charging across multiple legal entities and in as many steps as is required.

What we Offer

RECHARGE Manager provides the ability to automatically share costs across multiple companies with predefined values and an upfront configuration for an unlimited number of scenarios, so the often laborious process of manually processing transactions is avoided.

System uses multiple attributes to allow for a simple to complex matrix of allocations so that the costs can be distributed through a chain of companies with limited user input, raising the relevant intercompany dues and payables automatically.

Recharges can occur over multiple hops between companies and can terminate at either an internal company or invoiced to a 3rd party customer. Therefore dues and payables are raised and posted automatically to ensure that the position of each company is reflected correctly.

Utilizing the cost allocation process, allocations can be configured to auto assign, further simplifying user processes, where allocations can be performed over certain accounts and can be process across companies.

Recharge Manager
by Fusion the Apps People

What it can be used for:

- **Identify and Tag**
  Users will capture transactions on the system as they do today, adding an allocation either automatically or manually.

- **Batch Process**
  Periodically a batch process will pick up the transactions and Recharge them out to defined target entities in derived percentage allocations.

- **Intercompany Balanced**
  Recharge sales invoices and purchase invoices are created in the respective companies.

- **Detailed Analysis**
  Analyze in detail or in summary to verify expenses have all been Recharged.
