A Comprehensive Tower Management Solution

Fusion, the Apps People is a Brand of SIS Global Ltd

ABOUT Tower Management

Tower Management

is a comprehensive tower management solution built on Microsoft Dynamics 365 Finance and Operations, that combines both enterprise asset management functionality with leasing and special planning to provide a modern and dynamics solution for the telecoms industry

What we Offer

A full sites and tower register that combines both special planning with equipment definitions so that active and passive equipment on towers can be allocated to specific spaces on a specific tower and pinned to a certain Geolocation

The lease contract functionality caters for both lessee and lessor contracts, each of which can have multiple billing lines attached for rent, maintenance fees and many other charges that may relate to the contracts

The solution has full maintenance functionality including preventative, corrective, predictive and condition-based maintenance across all tower assets, as well as loan and client equipment

Record and track warranties against specific assets, whether they are based on a calendar time period or on equipment usage. Then manage any warranty claims related to repairs or maintenance. Store and track any related permits as well and know when those permits need to be renewed

Tower Management

by Fusion the Apps People

What it can be used for:

A view of your towers

Tower managers will be able to get a birds eye view of the sites and towers they are responsible for based on the hierarchical structures within the system, where towers can be grouped by country, region, state or city. Furthermore a user can drill down on specific towers to see what equipment is installed

Accurate Billing

Users responsible for lease contracts on all aspects of the towers, can manage their lease contracts with the appropriate start and end dates, and the various billing lines . This is irrespective of whether they are lessor or lessee contracts

Plan and Manage Maintenance

Tower maintenance managers can plan and schedule maintenance tasks using predefined templates. This includes management of tasks and teams , giving them full visibility on operations

Save by claiming on Warranties

Because the warranty information is stored against the related equipment record, if it is valid, a user is prompted to claim against that warranty, thus saving the company unnecessary maintenance expenses

Fusion the Apps People is an Independent Software Vendor (ISV) that forms part of the SIS Global Group. Fusion offers industry-specific solutions by extending existing business applications and functionality.
