

# Office 365 Backup & Recovery

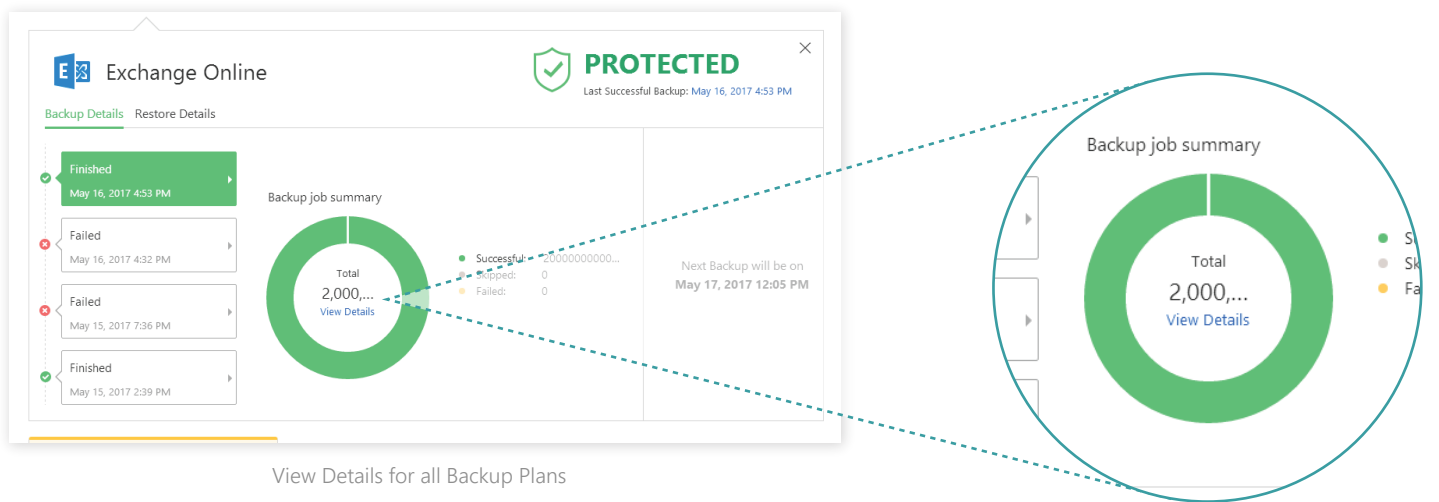

Your Cloud. Our SaaS. All-around Protection for Your Office 365 Assets.

## Comprehensive Backup

- **Platform Protection** - Unlimited backup of content in Office 365—including Office 365 Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Groups, Teams, and Public Folders.
- **Automatic Backup** - Your environment is protected from the moment you activate the product. Robust capacity options ensure your backup process starts automatically and runs up to four times a day (or every 6 hours).
- **Flexible Backup Schedules** - Offer options to lower the backup frequency and set the time for the first backup at your own discretion, giving you more control over the scheduled change windows throughout the day.
- **Storage on Your Terms** – Store backups in our scalable Azure Storage or any data center of your choice with support for Microsoft Azure, Amazon S3, Dropbox, and any data destination accessible via Secure File Transfer Protocol (SFTP) and File Transfer Protocol (FTP).
- **Backup Configuration** - Near-zero configuration for daily backup plans. Specify the scope you want to protect, and we'll handle the rest.
- **Backup Status** – Have a full view of your protection across Office 365 Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Groups, Teams, and Public Folders, all in one platform.
- **Backup Overview** – View details of the four most recent backups via an easy-to-read report dashboard including job status, time finished, total number of successful/-failed/slipped items, and suggestions for how to remediate issues.
- **Retention Policies** – Leverage long-term retention policies out-of-the-box to preserve data based on your corporate policies.

## Powerful Data Recovery

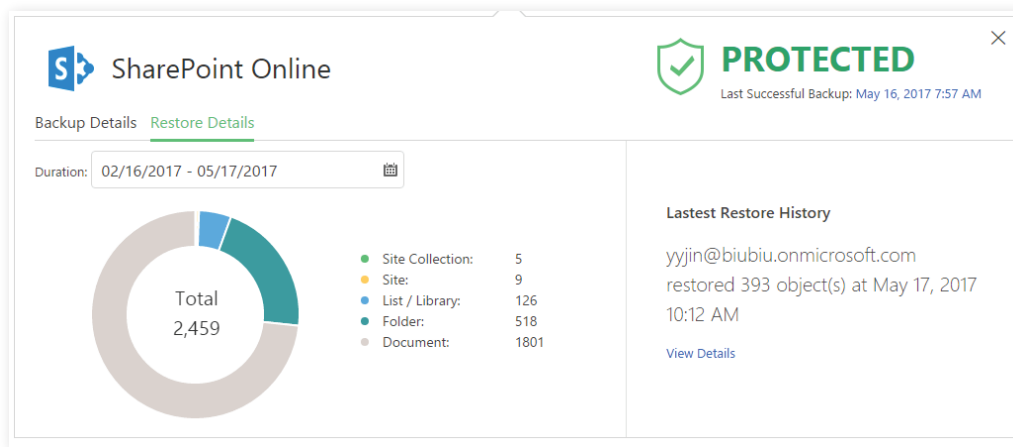

- **Granular & Full-Fidelity Restore** – On-demand, granular recovery of Office 365 content – including mailboxes, conversations, projects, tasks, calendars, sites, libraries, files, Groups, and Teams – to the online or offline storage location of your choice while maintaining all metadata and permissions.
- **Out-of-Place Restore** – Restore content and conversations to mailboxes, sites, OneDrive, or Groups – not just its original home.
- **Offline Restore** – Export files, mail items, or conversations directly to a local storage, allowing you to access data immediately or maintain an offline copy.
- **Security Rollback** – Granular restore doesn't just mean an individual document or version—perform security roll-backs to undo unintended permissions changes.
- **Simple Search** – Quickly identify content for restore based on properties—including content type, owner, date created, file size, parent list name, parent folder name, email subject, date sent, and more.
- **Object-based Restore** – Directly locate business-critical files or emails by utilizing the full-text search capability for rapid discovery.
- **Point-in-Time Recovery** – Recover quickly with time-based restores using a simple and intuitive calendar interface.
- **Conflict Resolution** – Provide intelligent conflict resolutions at different object levels, to ensure the most authoritative copy of content is recovered without interrupting normal business operation.
- **Restoration Overview** – Review restoration details during a specific period via an intuitive circle chart report.

The image shows the 'Flexible Restore Options' interface. It includes a sidebar with navigation options like Home, Office 365 Backup, and Dynamics 365 Backup. The main area is titled 'Select and restore the data:' and contains fields for URL, Backup Time Range, and Level. A 'Restore' button is prominently displayed.

Flexible Restore Options

The image shows the 'Simple Search' interface. It includes a sidebar with navigation options like Home, Office 365 Backup, and Dynamics 365 Backup. The main area is titled 'Select and restore the data:' and contains fields for Name, Backup Time Range, Level, and Subject. A 'Search' button is prominently displayed. Below the search results, there is a table with columns for Name, Backup Finished Time, Sent From, Sent To, and Location. A 'Restore' button is also present.

## Centralized Management & Security

- **Job Monitoring** – Track, manage, and report on all backup and restore processes through a centralized management console to monitor and enforce compliance with Office 365 policies.
- **User Activity Auditing** – Gain full visibility of how your backup and restore service is being used by auditing user actions, such as changing backup scope, altering system settings, or downloading a report.
- **Data Encryption** – Safeguard your data from cyberattacks or leakage by utilizing Microsoft Azure Key Vault Encryption to meet compliance regulations around sensitive data.
- **Email Notification** – Receive advanced email notifications with a detailed summary of backup and recovery information.
