popcornapps

MobiCure
Unified Platform for Patient Care

Healthcare providers, like other traditionally in-person businesses, need to prepare for a future where they have to meet the needs of patients more efficiently by focusing themselves on fulfilling care-giving services virtually.

Strategic decisions made by healthcare providers today, will determine how ready they will be for a future where patients expect their healthcare to be seamless and as convenient as online shopping. PopcornApps provides this strategic solution for healthcare providers by leveraging Microsoft Dynamics 365 for patient care management.

The system provides appointment booking, prescription fulfillment and diagnostic test booking all in one user journey. These transactions and activity data are funneled into Microsoft Dynamics 365 for patient 360 and other intelligent reports, to provide a foundation for preventive care services and condition management of the patient.

Patient 360°

Enables digital transformation for a healthcare provider with a focus on efficient, expeditious and ergonomic process flow both for the patient and the healthcare workers. Built on Microsoft Dynamics, MobiCure builds on the Microsoft Healthcare accelerator, adds functionality for scheduling, Telehealth, prescription and condition management. Moreover, functionality for sales, marketing and customer service brings together the capability for an end-to-end healthcare business enablement.
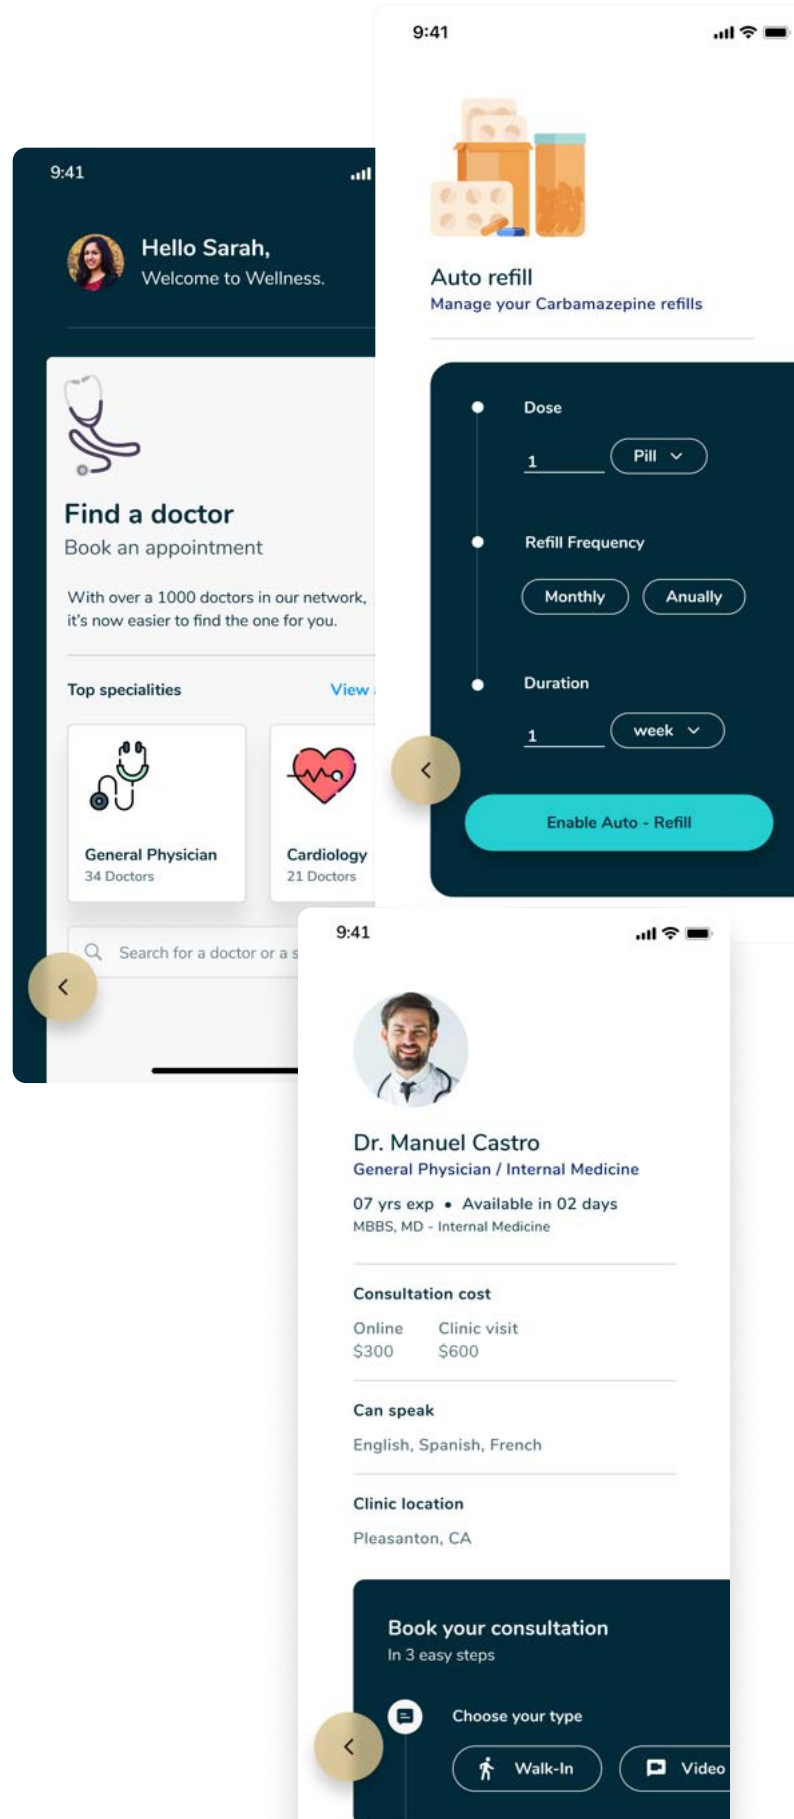

Patient Profile

Secure & authenticated registration

• User Profile

• Notifications (Alerts & Reminders)

• Health Summary

• Appointment History

• Prescription Renewal & Reminders

Doctor search & availability

• Search for a doctor

• Review detailed information, Credentials & Reviews
