

Commerciant SYNC for SAP S/4HANA and Microsoft Dynamics 365

Commerciant SYNC, the #1 data integration platform that integrates your data between SAP S/4HANA and Microsoft Dynamics 365. The Commerciant SYNC Agent is rapidly deployable and gives you access to your SAP S/4HANA customer and order information in Microsoft Dynamics 365. We work with the following: Business One, SAP Business by Design, SAP Business One version 8 (and up), SAP Business One Version 9.1, and SAP Business One version 9.2 and higher – this also includes Datalogix, and Vantive.

About SYNC:

Commerciant SYNC is created by ERP and CRM data integration experts. By having that, SYNC creates a simple data integration pathway between your SAP S/4HANA and Microsoft Dynamics 365. Once the data integration takes place, your SAP S/4HANA data is automatically loaded into your Microsoft Dynamics 365 without programming, coding, mapping or servers required. SYNCing data is a cloud-based experience that ensures your data is protected. SYNC has the following benefits:

- Data integrated from SAP S/4HANA to Microsoft Dynamics 365 becomes native data inside Microsoft Dynamics 365 CRM. Being native data inside the CRM means bringing data from your SAP S/4HANA over to Microsoft Dynamics 365 in which you can perform any function from that data and manipulate it to the way you need it, for example, connecting to third-party apps and creating dashboards
- Inside Microsoft Dynamics 365, the system provides the function of a user-friendly search engine to look up data that is SYNCed from SAP S/4HANA because the data is native, it is searchable. For instance, looking for a serial number that relates to a Sales Order record or Invoice Record
- The Commerciant SYNC app developed for SAP S/4HANA and Microsoft Dynamics 365 detects changes in either database whether it is SAP S/4HANA or Microsoft Dynamics 365 and SYNC only those changes in the data within either system

What if I have an existing Microsoft Dynamics 365 database?

When you have existing data in both systems (SAP S/4HANA and Microsoft Dynamics 365) the following steps will take place, first, the data will need to be backed up, second, you will come to a point when integrating the data and you will have to do deduplication on 3 items that we have a native function inside our Commerciant SYNC app that also leverages artificial intelligence(AI) for following items listed below:

- Accounts: Deduplication happens here when customer names are spelled incorrectly and deduplication for child-parent relationships, form part of the standard purchase of Commerciant SYNC at no additional costs.
- Customers: They need deduplication as there are customers with no accounts that are contacts and there is an AI for this.
- Products/Items: Deduplication happens for this when there is a different item description over the same product.

What does SYNC offer?

Customers in SAP S/4HANA are integrated into Microsoft Dynamics 365. The first item to be SYNCed is your **AR Customer Record** and once this is completed, all the fields can be shown. Customers Ship To and Bill To address in SAP S/4HANA are merged into Microsoft Dynamics 365, which can be displayed according to their needs. By clicking on the SAP S/4HANA Customer Record, you can see all the fields that are synchronized.

The screenshot displays the Microsoft Dynamics 365 interface for the 'Sandia National Labs' account. The interface is divided into several sections, each with a corresponding label on the right side of the image:

- Customer Records:** A table showing customer details. The data row for 'Sandia National Labs' includes: CREDIT HOLD (N), CUSTOMER TYPE (HOUS), CURRENT BALANCE (160,740.00), CREDIT LIMIT (100,000.00), LAST PAYMENT (84,492.30), DATE LAST (9/10/2014), and DATE LAST (9/30/2014).
- Open Sales Order:** A table showing open sales orders. The data row for '1412189' includes: Account (Sandia National Labs), SALESPE (1000), ORDER (8/6/2014), ORDER (O), ORDER (S), CUSTOMER (SAN), BILL TO NAME (Sandia National Labs), WAREH (100), and NON TAXABLE AMT (47,600.00).
- Invoices:** A table showing invoices. The data rows include:
 - Invoice 0243826: Sandia National Labs, Sandia National L, 80,370.00, 7/28/2014, 8/12/2014, IN, ---, 0.00.
 - Invoice 0243921: Sandia National Labs, Sandia National L, 0.00, 7/29/2014, 1/1/1900, CM, ---, 0.00.
 - Invoice 0248814: Sandia National Labs, Sandia National L, 160,740.00, 9/30/2014, 10/15/2014, IN, ---, 0.00.
- Ship To Address:** A table showing ship to addresses. The data row for 'SANDIA NATIONAL LABS' includes: Account (Sandia National Labs), SALES PERSON NO (1000), CONTACT CODE (---), SHIP TO CITY (ALBUQUERQUE), SHIP TO STATE (NM), and CUSTOMER NO (SAN).

Sales Order With Line Item Details

Once the Customer Record is in Microsoft Dynamics 365, Commerciant then SYNCs the **Sales Orders and their Detail Lines** which relates them to the corresponding Microsoft Dynamics 365 Account record. A customer object is then created in Microsoft Dynamics 365 as the Sales Order data and Invoice Sales Order data is combined into one, since each customer's needs are unique. This allows customers to see their invoices that have their orders and details as well as, viewing the different statuses of their sales orders as they change in SAP S/4HANA. When removing SAP S/4HANA Sales Order data that has been canceled from Microsoft Dynamics 365, it performs automatically.

The screenshot displays the Microsoft Dynamics 365 interface for an invoice. The top navigation bar shows 'Dynamics 365' and 'Invoices > 0243826:000000'. The main content area is titled '0243826:000000 Invoices' and includes tabs for 'General', 'Remaining Information', 'Information', and 'Related'. The 'Information' tab is active, showing two sections: 'Invoice Line Items' and 'Invoice Payments'.

Invoice Line Items

ExternalKey ↑	INVOICE...	ITEMCO...	ITEMCODEDESC	UNITCOST	UNITOF...	UNITPR...	VALUATI...	WAREHOUSECODE	COMMISSIO...	COST
0243826:000000:000000	0243826	CUSTOM	CUSTOM ITEM: UL...	23.50	EACH	8,037.00	3	000	0.00	---
0243826:000000:000000	0243826	/C	Default Item Code...	0.00	---	0.00	---	---	0.00	---
0243826:000000:000000	0243826	/C155	REQUESTED DEL...	0.00	---	0.00	---	---	0.00	---

Invoice Payments

INVOICENO	TRANSACTIONAMT	TRANSACTIONTYPE	CHECKNO	TRANSACTIONDATE	Invoice_R	ExternalKey ↑
0243826	-382.20	Credit Memo	---	7/29/2014	0243826:000000	00:SAN:0243826:IN:7/29/2014

A blue callout box on the right side of the screenshot points to the 'Invoice Line Items' table with the text 'Sales Order With Line Item Details'.

Sales Order Screen Showing Account Object

Commerciant has designed the relationships with the data objects in Microsoft Dynamics 365 that can give you the freedom to decide which objects you would like to display on the screen. You are always able to click to other **parents- or child-related objects**. For instance, an Admin user can remove the Sales Orders from the Account screen but leave their **Detail Lines**. This allows our customers to see what was sold and shipped from the main account screen. By clicking on the Sales Order link on the detail line, they can view the full Sales Order.

Sales Order Line Items From Account Object

The AR Invoice

- The AR Invoice is a record that is synced and related to the **Invoiced Sales Order Data**, and **Invoice Payments**.
- The AR Invoice data is useful for identifying unpaid invoices and locating the data, in which the customer needs to pay for the services used.
- The other records which are used in SYNC include the **AR Customer Ship to Tax Exemptions**, **Item Master**, and **Item Warehouse**.
- The **Item Master** is used to create **Microsoft Dynamics 365 Products** by Commerciant and links the entire **Item** and **Warehouse** records to the **Product**.
- This gives you the ability to have accurate product data and Inventory availability. In addition, you can **SYNC any Database, table, or view**.

The screenshot shows the 'Active Invoices' table in Microsoft Dynamics 365. The table contains columns for Invoice ID, Bill to Name, Account, Amount, Subject, Invoice Date, Invoice Due Date, Invoice Type, Payment Type, and Credit Card Payment. To the right of the table, two green boxes with arrows point to specific rows: 'Invoice Sales Order Data' points to the row with Invoice ID 0226920, and 'Invoice Payments' points to the row with Invoice ID 0226926.

Can I limit or control the data that I SYNC?

Yes. Commerciant has created an open methodology of allowing you to control the filtering of data in the SQL WHERE statement while maintaining the integrity of relationship mapping and efficient syncing methodologies. Within the WHERE you can perform sub-queries, filters, and cross-table and cross-database sub-queries to affect the rules. In addition, you can also map custom tables or views. (Charges may apply).

What else does Commerciant do with Microsoft Dynamics 365?

Data synchronization is the first step towards a total solution. Ask about these additional modules for SAP S/4HANA:

- Quote Processing
- Web-based Product Configurator
- Opportunity and Quote -> Sales Order Conversion
- Products and Price Book SYNC
- Product Record Types
- Cases with Serial Numbers Invoiced and Service Orders
- Opportunity Commissions Calculations based on SAP S/4HANA Invoices
- Automatic SAP S/4HANA Sales Order Email Engine
- Automatic Invoice Email Engine
- Dealer/ Wholesaler Self-Service Portal
- Custom Data Synchronization
- Account Conversion to SAP S/4HANA AR Customer

Company Information:

Commerciant is a cloud-based company that connects Microsoft Dynamics 365 directly to your SAP S/4HANA system. Our open SYNC Agent works with software such as Epicor, SYSPRO, TRAVERSE, and other ERP accounting systems. Commerciant improves the efficiency of getting CRM, B2B, and B2C eCommerce orders directly into your accounting system in real-time, with all of the associated business rules.
