

Benefit from our expertise  
for an easy, quick, low-risk,  
and out-of-the-box solution

## **Siemens Teamcenter PLM integration**

with Dynamics 365 for Finance & Operations

# What can **PLM integration with ERP** do for you?

- ✓ Integrate STC PLM with D365 F&O Using Out-Of-The-Box Technology
- ✓ Connect Siemens Teamcenter PLM and D365 F&O with One-Click Deployment
- ✓ Integrate the Engineering and Operations Domain Seamlessly
- ✓ Establish Complete Control in a Dynamic Business Environment

# Benefits from the product

Establish smooth and well-designed integration supported by robust tooling to shorten product development cycles and enable quicker time-to-market

Manage software and product lifecycles within Dynamics 365FO so that the purchase, design, and engineering teams work in tandem

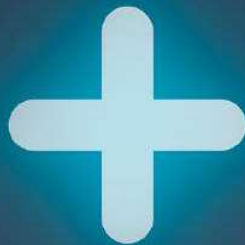

The solution has been designed by the domain experts who have inculcated features based on their deep expertise to mitigate the problem areas

The implementation time is as short as two weeks, which means that the integration is complete with minimal intrusion on operations

Enhance collaboration between engineering and operations. It enables real-time connection between engineering and operations to start work as early as possible.

# Features

<b>Flexible Release Policies</b>	Release from anywhere in a complex BOM, enabling procurement, production, and planning to begin working on part of the product while other parts are still being engineered.
<b>Revision Management</b>	Extend revision management into the Microsoft Dynamics 365 Finance & Operations environment, providing tight control and increased insight into revision updates that take place during the numerous lifecycle stages of the product.
<b>Trigger Managed Processes</b>	Import items, BOMs, and revisions into Microsoft Dynamics 365 Finance & Operations to trigger a managed process, which ensures that required logistical data is managed in a controlled manner within Microsoft Dynamics 365 Finance & Operations.
<b>Mapping Custom Attributes</b>	Take advantage of flexible To-Increase PLM integration within Microsoft Dynamics 365 Finance & Operations environments. The integration supports mapping of unlimited custom attributes to fields in Microsoft Dynamics 365 Enterprise Operations.
<b>Integration Platform</b>	Build using Teamcenter Gateway Integration (T4EA) platform of Siemens

# Product highlights

## Coding not configuration

Use To-Increase PLM integration for Siemens Teamcenter to connect with D365 F&O with your existing IT resources.

## Process and validate

You can get output from Siemens Teamcenter in D365 F&O without coding. Click a button to transfer released products, BOMs, and attributes from STC to D365 F&O

## Collaborate two worlds

With the Product Engineering solution from To-Increase, you can allow two different worlds to collaborate while adhering to their specific best practices. The integration allows each domain to function in systems familiar to them while still fully connected.

# Customers

Trusted by 2,200+ Industry Leaders

“ As we shorten our delivery times and capitalize on our flexibility in meeting changing customer requirements, we become more competitive and enjoy higher levels of customer satisfaction. That will reflect in increased revenue. ”

— **Tor Morten Stadum,**

Manager of Design and Engineering,  
Tronrud Engineering
