

# Automate your healthcare data with surgical precision

## Each, an innovation

Together, a breakthrough

### Eligibility

Intelligent, automated conveyor belt for patient-eligibility and insurance verification, eliminating dozens of manual steps and reducing denials

### Remits

Unlocks remittance data to provide business intelligence and analytics + auto-creates and routes tasks and queues with very little configuration needed

### Patient Pay

Hi tech patient-centered payment environment automatically calculates and updates patient responsibility—in addition to full paper billing services

### Claims

Hi tech patient-centered payment environment automatically calculates and updates patient responsibility—in addition to full paper billing services

Our solutions are modular by design and symbiotic by nature (Chorus!). Modules empower providers to cherry-pick functionality, or leverage complete solutions with our pre-linked Compositions. All without dropping their existing suite of solutions.

## Integration partners

## We work harder

So you work smarter

### Built to the latest, highest standards

By healthcare professionals, for healthcare professionals. We understand both internal and external requirements, applying cutting-edge, enterprise-grade features like cloud-native design, granular security roles, and our proactive Validation Oracle™—all within strict HIPAA compliance.

### Designed for growth hacking

Deeply ingrained, systemwide AI helps you get a new grip on patient information, staff performance, business processes and other metrics that help you scale up, unleash revenue, and maximize manpower.

### Made with the impatient in mind

Platform agnostic, Chorus plays nice with virtually all existing software, even with limited API availability. And intrinsic modularity enables 10x faster deployment, low-code integration and configuration, and endless scalability/extensibility.

Interoperability:

## No provider left behind

In the absence of standards forcing modernization, Chorus is FHIR compatible for EHR exchange, and the full suite of X12 transaction sets for communicating with payers. Chorus bridges this gap between legacy and next-gen tech, creating a safe environment for operators to pursue digital transformation at their own tempo.
