The easiest to use and most powerful in-memory data grid to scale your .NET and Java applications

ScaleOut StateServer® delivers production-proven performance, rock-solid reliability, and industry-leading ease of use. Scale your application’s performance by storing fast-changing data in memory with integrated scaling and high availability, powerful APIs, and comprehensive management tools. Offload your back-end database server to dramatically increase access performance and scalability, while lowering infrastructure costs. Patented storage technology enables fast, grid-wide access to all stored data and ensures high availability during server outages or planned downtime. Optimized for enterprise .NET applications since 2005, StateServer also fully supports Java/Linux environments and is deployable both on-premises and on Azure/AWS public clouds.

**ENTERPRISE IN-MEMORY DATA GRID**

Scale your application’s performance with a production-proven, in-memory data grid (IMDG) and distributed cache for both Windows and Linux that delivers blazingly fast data access with industry-leading technology for automatic scaling with full data coherency and integrated high availability. Powerful APIs for C#, Java, C/C++, and REST make it easy to access, query, and analyze live data. Industry-leading management tools ensure fast deployment, simplified administration, and low TCO.

**TYPICAL USE CASES**

ScaleOut StateServer incorporates more a decade of technology development and production use. It has been put to the test in a wide range of mission-critical applications across many industries and use cases. Any application which manages an elastic workload with live, fast-changing data and requires consistently fast, reliable data access will benefit from ScaleOut StateServer. For example, a high-traffic web application running on a server farm can use this technology to store session-state and maintain fast response times even under peak workloads. Here is just a sample of the applications and workloads that benefit from ScaleOut StateServer:

- **Websites & Ecommerce**
  - Session state
  - Shopping carts
  - Application state

- **Media**
  - Real-time ad tracking
  - Live usage
  - Video feed status

- **Financial Services**
  - Ticker feeds
  - Portfolio analysis
  - Trading data

- **Healthcare**
  - Patient monitoring/alerts
  - Clinical informatics
  - Instrument telemetry

- **Internet of Things**
  - Sensor data
  - Mobile app state
  - Telemetry feeds

- **Many more...**
  - Travel reservation systems
  - Customer service centers
  - Online learning testing & real-time scoring

**TYPICAL CHALLENGES SOLVED BY IMDGS AND DISTRIBUTED CACHING**

- Database bottlenecks
- Slow data access and website response times
- Sticky sessions required for server affinity
- Insufficient server memory for applications
- Need to easily scale application workloads
- Demand to track and quickly analyze live data
- Complex distributed software development

KEY FEATURES AND CAPABILITIES

Recognizing that distributed caching can be a complex technology to deploy and use effectively, ScaleOut Software has designed ScaleOut StateServer with the core vision of offering the industry’s best combination of scalability and ease of use. As a result, our products are packed with powerful capabilities that help our customers easily develop and deploy highly scalable applications.

<table>
<thead>
<tr>
<th>Key Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fast data access</td>
</tr>
<tr>
<td>Linear scalability</td>
</tr>
<tr>
<td>High availability</td>
</tr>
<tr>
<td>Ease of use</td>
</tr>
<tr>
<td>Fast development</td>
</tr>
<tr>
<td>Cost-effective</td>
</tr>
<tr>
<td>Parallel query</td>
</tr>
<tr>
<td>Optional features</td>
</tr>
</tbody>
</table>

WHAT SETS SCALEOUT STATESERVER APART

ScaleOut StateServer was designed from the ground up to host live, mission-critical data with fast, scalable access and integrated high availability. Its patented technology, peer-to-peer architecture, ease of use, and enterprise-grade support from ScaleOut Software set it apart from the competition. Take a look at how it compares:

<table>
<thead>
<tr>
<th>AppFabric Caching</th>
<th>Redis</th>
<th>Memcache</th>
</tr>
</thead>
<tbody>
<tr>
<td>Support ended by Microsoft</td>
<td>Sharding and load-balancing not integrated into the server</td>
<td>Rudimentary read-only distributed cache</td>
</tr>
<tr>
<td>Complex to configure, deploy and maintain</td>
<td>Complex master/slave model for high availability; no quorum support</td>
<td>Sharding and load-balancing not implemented</td>
</tr>
<tr>
<td>Erratic access delays due to C# garbage collection</td>
<td>Not suitable for mission-critical data due to eventual consistency model</td>
<td>No support for replication &amp; high availability</td>
</tr>
<tr>
<td>Single point of failure, no LINQ query, no GUI management, ...</td>
<td>No support for distributed computing</td>
<td>No advanced features (e.g., bulk insert, distributed query, WAN replication)</td>
</tr>
</tbody>
</table>

THE SCALEOUT SOFTWARE IN-MEMORY COMPUTING PLATFORM

Today’s applications need fast access to data for maximum performance. At the same time, the need to quickly analyze live data and obtain immediate feedback has never been greater. ScaleOut’s technology combines the power of an in-memory data grid with an integrated compute engine to enable “operational intelligence”—the ability to identify and capture business opportunities in the moment, before they disappear.

Whether your live data is hosted in a server farm, compute grid, or the cloud, ScaleOut Software’s suite of products eliminates scalability bottlenecks and gives you ground-breaking tools to deliver the insights on fast-changing data that your business demands.

Try ScaleOut for free.
Use the power of in-memory computing in minutes on Windows or Linux.
