

Change Log Quick Access in Microsoft Dynamics 365 Business Central

EN

Your master data are subject to constant change. There are desired and unwanted changes. It is therefore important that you always have an overview of the changes that are made and that you are able to provide information quickly.

Highlight

The function "Change log" in the Business Central Standard can only be called in the main menu "Administration" and displays all data unfiltered and unclear.

The "Change Log Quick Access" app from KUMAVISION extends this functionality: You can open the change log directly from any master data card. Preset filters then show you exactly the log entries of the data record that you need – without you having to make any further settings.

Your benefits

- Fast ability to provide information
- Overview of old and new values and when and by whom they were made
- Time saving through pre-set filtering
