

DXC Label Extension for Warehouse Management

Optimize label design with access to your batch master data

Advantages

- Save time and resources with optimized label design
- Reduce the number of label layouts you need to make
- Ensure data accuracy by referencing batch data from your ERP installation
- Use without technical expertise
- Fast verification of label layouts with instant label views and previews

Designing and printing labels is a critical business function. Without access to your crucial batch data, this can be a time consuming, error-prone and manual process. In addition, when designing labels with an external label tool you often need to make modifications to the code after you copy it over to your Microsoft Dynamics 365 for Finance and Operations application. DXC Label Extension for Warehouse Management dramatically simplifies this process by providing seamless access to batch master data in your ERP installation, so you can make label designs to meet your exact business needs and create multiple, different labels from a single label design.

Ensure data accuracy and seamless access to your batch data

DXC Label Extension for Warehouse Management works seamlessly with Microsoft Dynamics 365 for Finance and Operations to optimize your label design processes. The solution extends standard document routing capabilities and ensures data accuracy by referencing all the crucial batch master data for your batch-controlled products. You can then include this information in your label designs.

Save time and resources with optimized label design

Create labels in a fraction of the time with an intuitive and familiar interface. Simply copy label layouts from your external label designer into Microsoft Dynamics 365, and DXC Label Extension for Warehouse Management will automatically merge data from the correct batch data fields, without any further customizations or the need for technical expertise.

Features

- Built for Microsoft Dynamics 365 for Finance and Operations
- Seamless integration with your document routing processes
- Access batch data fields and attributes, and include additional details about your batch-controlled products in your label designs
- Automatically merge data from external label design tools without code modifications
- Viewer Tool to view and monitor all labels printed in your ERP system

Improve operational efficiency with instant label previews and views

Quickly make changes to existing label layouts and preview the changes as you design. With the DXC Label Extension, you can view finished labels containing label layouts and master data from inside Microsoft Dynamics 365 as they are generated by the system.

See real-time label printing status notifications

When running a continuous production flow within a global network, several printers can produce many labels per day. The DXC Label Extension's built-in Viewer Tool provides an overview of all labels printed from your ERP system with efficient, real-time status notifications. When your system generates a new label, you can open a browser-tab that shows a preview of the label with the specific data included, so you can quickly verify the label layout and content.

DXC and Dynamics 365 — all you need from one experienced partner

DXC Technology is a leading, global Microsoft Dynamics 365 partner. With a strong ERP and CRM foundation, and deep IT capabilities, we offer expert help on everything from hardware, infrastructure, hosting, support and service to management and process consultancy. Our experienced consulting can help you find solutions that address current challenges and enable future plans.
