Symphony 30000 feet view

S4S is not limited to automate the day-to-day operations, but also takes control of assessing your SAP estate to perform suitability analysis for the cloud and the on-prem world. Post the assessment, S4S can orchestrate the cloud migration. When you are shifted and residing in cloud, you can use S4S to manage your day-to-day operations efficiently.

In essence, S4S can automate every single planned actions that you may have across the various layers such Cloud, Operating System, Database and SAP.

Why should I pick Symphony?

Time can be a constraint with lots to deliver. You should go for **Symphony**, if bringing **efficiency, speed** and **agility** in cloud migration or day-to-day operations is a priority.

Pick Symphony, if your team is currently spending **significant time** in mending technical debts or managing planned actions such as Kernel Upgrade, System Copy, Client Opening and many more such associated actions.

Last but not the least, you need it if you want to give your end-users the **ability** and **responsibility** to perform actions such as Client Opening, Start/Stop Sandbox VMs, etc.,

- Role Based Access Control
- Approval Workfow
