

ThinkAndor™ –

Your indispensable clinical concierge for Virtual Community Collaboration & ADT Compliance.

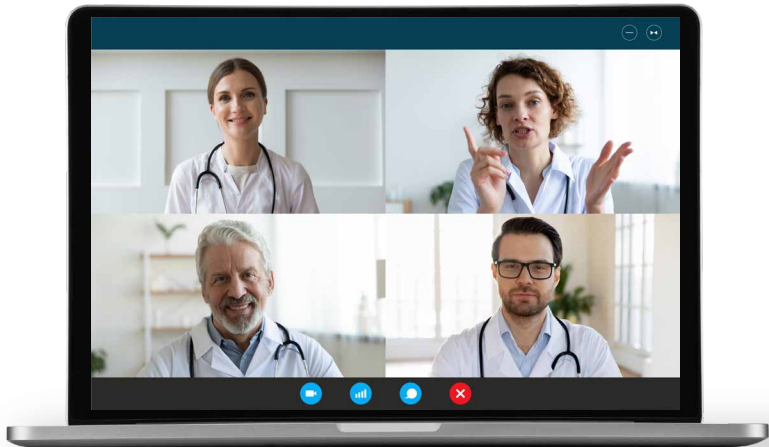

Andor Health has partnered with Microsoft to bring a virtual assistant to healthcare workers as they collaborate within Microsoft Teams.

Virtual community collaboration and ADT compliance are easier than ever with ThinkAndor™. In fact, Andor Health will guarantee 100% compliance with Florida House Bill 843 & Centers for Medicare and Medicaid Services’ ADT notification rules.

We ensure you are able to comply with ADT notification rules and that the revised Conditions of Participation are not burdensome. ThinkAndor® allows physicians the ability to easily interact with their peers and community physicians.

- Automated omnichannel approach to notifying PCPs of ADT events
- Automate manual and fax processes
- Full configuration of workflows and patient event notifications
- Collaborate with community physicians across care settings and disparate EMR systems
- Keep Conditions of Participation for Medicare

What does the new ruling require?

On March 9, 2020, United States Department of Health and Human Services (HHS) Centers for Medicare and Medicaid Services (CMS) and Office of the National Coordinator for Health Information Technology (ONC) released the final Interoperability and Patient Access Rule, forcing healthcare institutions to adopt modern technologies to deliver enhanced care coordination.

CMS is modified the Conditions of Participation (CoPs) to require hospitals, including psychiatric hospitals and CAHs, to adopt modern enabling technologies to share data from major patient events such as admission, discharge, and transfer with community providers and post-acute care teams. To maintain Medicare eligibility, the CMS rule states that providers are required to comply with the new rules within twelve months.

ThinkAndor™

ThinkAndor™ can be leveraged by all care team participants via a secure, HIPAA compliant framework that streamlines workflow and enables real-time care collaboration.

- Pull lab results in real-time
- Pull medications
- Write voice dictated notes back to the EMR
- Access the most recent discharge summary
- Enhance telehealth capabilities by retrieving patient records, intake forms, and more

Care Team Channel Notifications & Triggers

ThinkAndor™ can be configured by each care team member to notify them of the signals that they find most important to delivering care.

- Triggers can be set to automatically notify the care team regarding updates to a patient chart. Simply say, “Andor, send me the patients lab result when its ready”.
- Care teams can continue their work and ThinkAndor™ will push these signals to care team members at the appropriate time.

About Andor Health

At Andor Health, our mission is to change the way care teams connect and collaborate. By harnessing machine and human intelligence, our cloud-based platform unlocks data stored in electronic medical records to deliver real-time actionable intelligence to care teams – both inside and outside of their enterprise. By optimizing communication workflows, our solutions accelerate time to treatment, decrease clinician burnout, and drive better patient outcomes.
