

ThinkAndor™ – your indispensable clinical concierge for virtual team collaboration and secure communications.

Andor Health has partnered with Microsoft to bring a virtual assistant to healthcare workers as they collaborate within Microsoft Teams.

ThinkAndor™ provides a secure HIPAA compliant platform that enables care team collaboration across the care continuum. ThinkAndor™ also offers secure messaging via audio, video and text as well as virtual health enablement for collaboration across the care team.

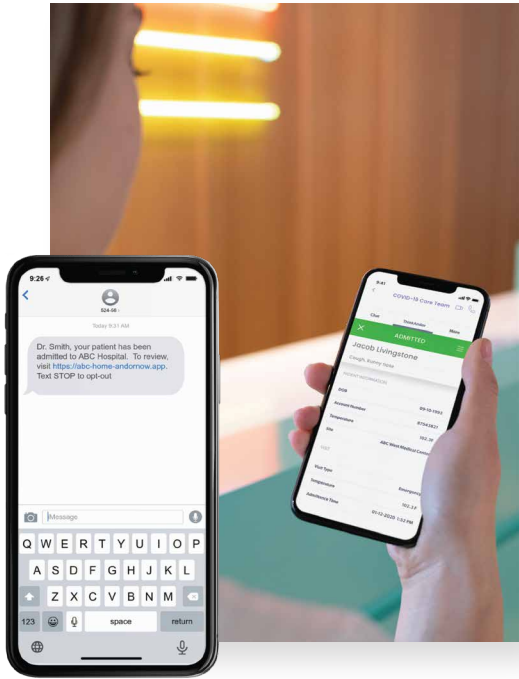

ThinkAndor™ has a robust configuration tool that allows for the personalization of signals notifications and actions from any EHR, all with an easy to use interface. Comprehensive reporting and analytics are also available with a few simple clicks.

ThinkAndor™ for Acute Care Communications & Collaboration

- ADT notifications to primary care physicians for patient events
- Attending physician / primary care consultation & chat rooms
- Critical lab notifications

- Daily patient summary list for care teams
- Pre-op paperwork notifications
- Outpatient surgical schedule
- Microsoft Teams and calendar integration

ThinkAndor™ for Post-Acute Communications & Collaboration

- Community care notifications & chat rooms
- Discharge & transfer notifications
- Discharge summaries & instructions
- Post-Acute information sharing

About Andor Health

At Andor Health, our mission is to change the way care teams connect and collaborate. By harnessing machine and human intelligence, our cloud-based platform unlocks data stored in electronic medical records to deliver real-time actionable intelligence to care teams – both inside and outside of their enterprise. By optimizing communication workflows, our solutions accelerate time to treatment, decrease clinician burnout, and drive better patient outcomes.
