

Fastest, Easiest, and Lowest Cost Cloud Transfers

Moving data to the Cloud is slow and difficult. The top priority for uploading and downloading data is to move data as quickly and economically as possible, minimizing reliance on IT resources and improving operational workflows.

Pixspan's PixMover software accelerates data from local storage to Azure Blob and between local or private Cloud storage. PixMover operates through a browser-based GUI, without the need for scripts or command line programming.

- Move the most data in the least amount of time
- The only way to transfer data at greater than line speed
- Improve productivity with faster and easier data transfers, without special training or IT resources
- Move data inexpensively with predictable flat subscription price, eliminating unexpected charges

Accelerate Your Data

- Speed up projects with ultra-fast transfers to and from Azure, local, and private Clouds
- Increase utilization of existing networks resulting in faster transfers
- Avoid high per GB network optimization software costs

The Fastest Way to the Cloud

Eliminate Complexity

- Intuitive GUI interface
- Simple drag-and-drop; presents all files as icons
- Dashboard shows each transfer status
- Intelligent file handling

Easiest Way to Move Data

Unique Bit Exact

- Multiplies transfer speeds 2X-5X
- Lossless compression – 50%-80% storage and egress savings
- Supports the largest file types and sizes --full resolution image and video

Industry's Only Commercial Lossless Compression

"PixMover multiplies the transfer speed for VFX content 2X to 5X faster than traditional WAN transfers, achieving unprecedented transfer performance levels."

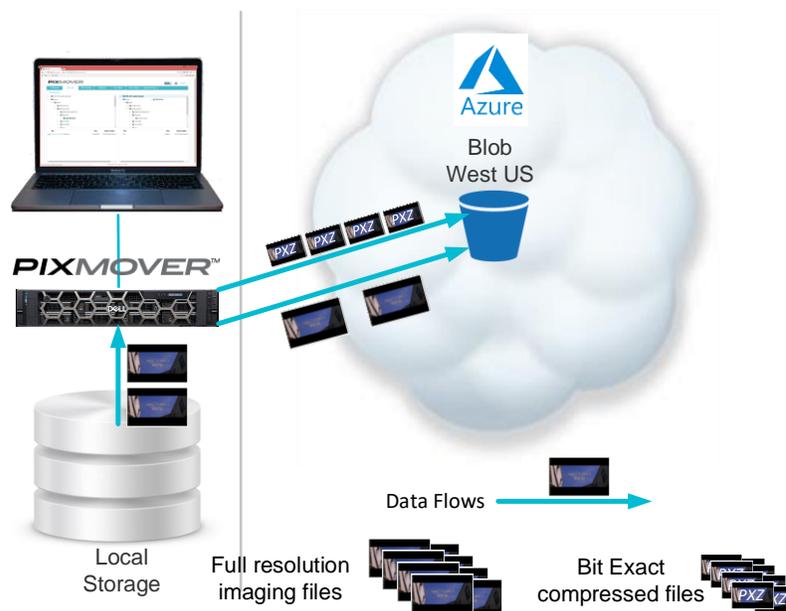

Technicolor.com/case-studies/messiah, Technicolor

PixMover accelerates data between local storage, Azure Blob, and private Cloud at maximum speed

- PixMover accelerates Cloud uploads 2X-5X
- PixMover saves 50%-80% on Cloud storage and egress fees with its Bit Exact Round Trip™ lossless compression
- Customers saved two shifts of a three-shift transfer, enabling their teams to work in the same day
- Technicolor and Pixspan teamed with Azure to triple upload speeds for Technicolor's PULSE platform
- PixMover enabled Technicolor's PULSE platform to become the fastest way to upload data to Azure

Pixspan's PixMover

Accelerates your data quickly and easily to support hybrid operations.

- Pixspan's PixMover can begin accelerating your data transfers on the first day
- Introductory offer: 30 days of software and up to five hours of support
- This is enough in software with support hours to upload up to a Petabyte of data

Speed up your operations

- Accelerate data movements by up to 5X
- Make it easier to reliably transfer high volumes of data, freeing up IT resources
- Stretch existing networks to greater capacity
- Eliminate or postpone expensive network upgrades

Why Pixspan?

Pixspan provides the fastest and easiest data acceleration for moving large data files of any type and size on-premise to, from, and within the Cloud globally with the lowest predictable cost.
