

SysKit Insights is an innovative tool for monitoring SharePoint performance and troubleshooting your servers via ULS, SQL, and Windows Event logs. Monitor performance of all SharePoint pages and servers from a single console.

## Benefits of SysKit Insights

- ✓ No more logging into each server individually to find the right log
- ✓ Find out about errors ASAP and eliminate them before they affect end users
- ✓ Make sure that you are compliant with Microsoft's requirements
- ✓ Minimize SharePoint downtime by receiving warning alerts
- ✓ Have an overview of all your farms in a centralized location

For SharePoint on-prem, online & hybrid

Easily identify any problem and find the right ULS log in seconds

Always know the state of your servers by monitoring the most relevant counters.

Prevent damage to your system by receiving real-time email alerts

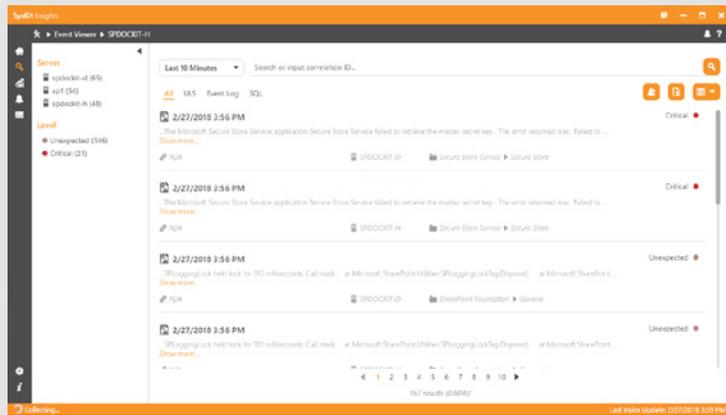

Keep your SharePoint fast by monitoring intra-farm latency

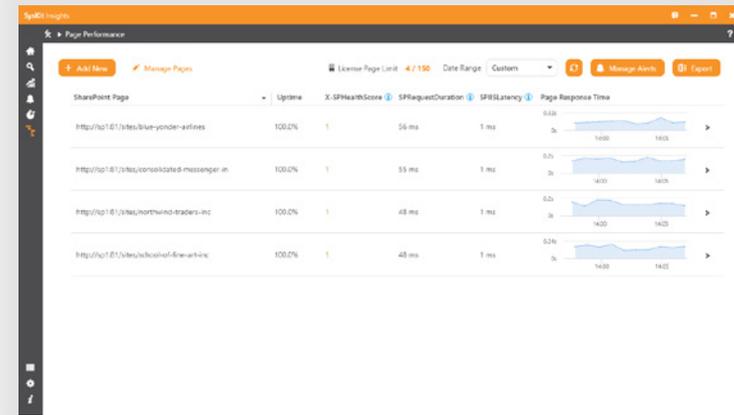

Access SysKit Insights in the web app & easily monitor and share data

# Features

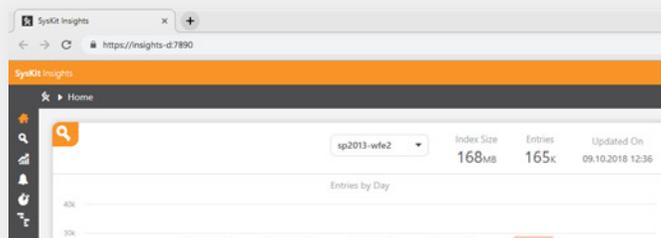

## Centralized Event Viewer

Centralized Event Viewer gathers ULS, SQL and Windows Event logs **from all servers across all farms in one central location**, allowing you to easily search through and filter them.

## SharePoint Page Performance Monitoring

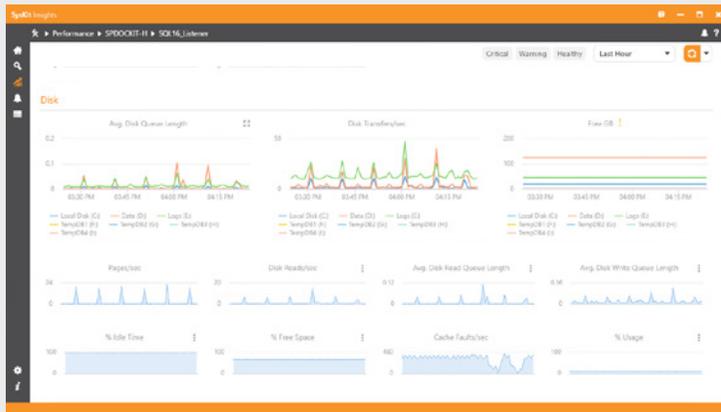

You will be able to **instantly see essential page** metrics like Uptime & X-SPHealthScore, and also drill deeper. Check out your page's score and see how long it took for each element of your page to load . This way you will be able to find causes of slow pages and fix them.

## Web Application

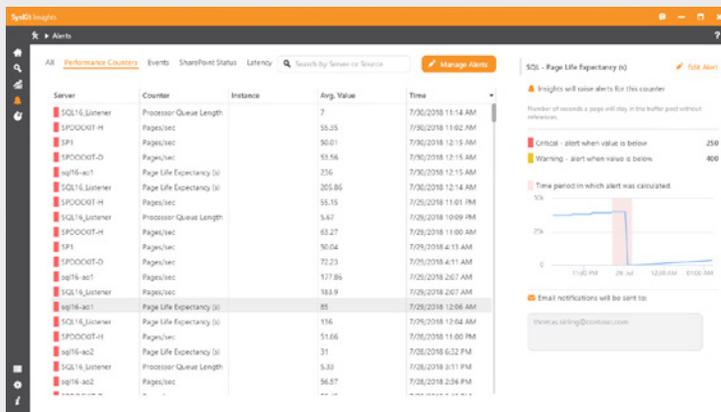

SysKit Insights is available both as a desktop app and as a web app. The main advantage of a web app is that it's available to you everywhere and that you can easily share reports with a simple URL. You can allow access to your managers or other admins, and share reports with a few clicks.

# Features

## SharePoint Performance Monitoring

SysKit Insights will automatically recognize the server's role and monitor the **most relevant performance counters** according to the role. Keep your environment safe by monitoring **real-time and historical performance**.

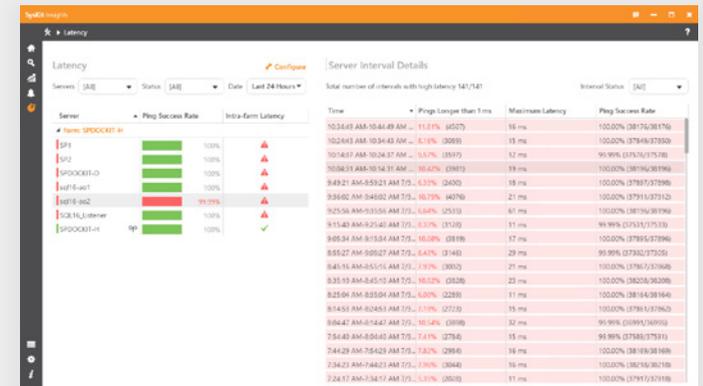

## Intelligent Alerts

Receive **real-time email alerts** based on:

- Performance
- Events
- SharePoint Status

You can now relax knowing that you will know when SharePoint Services, Site Collections, and SharePoint servers experience problems.

## Intra-Farm Latency Monitoring

**Microsoft requires** all farms to have latency of 1ms, 99.9% of time in a 10-minute interval. It's very difficult to monitor the underlying network layer, but SysKit Insights will make it a breeze and help you **stay compliant**.

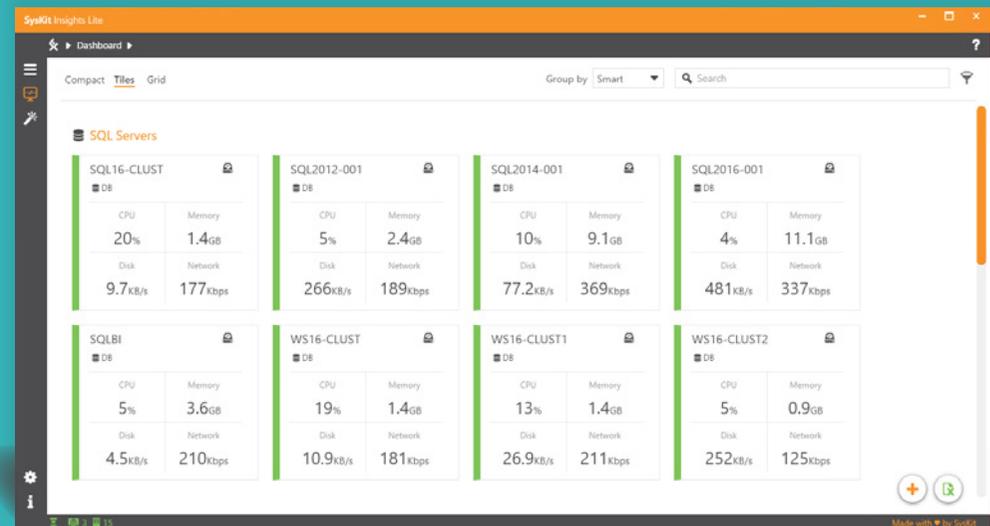

## Annual Subscription

Fully featured and it is perfect for you if it's important that your SharePoint is always up and that your environment is running flawlessly.

## SysKit Insights Lite

SysKit Insights Lite is a free edition of SysKit Insights that enables you to auto-discover and monitor your servers.

SysKit Insights Lite will help you group your servers, and recognize their roles, it will also allow you to easily see servers with critical performance, and even export data. If you need a more advanced version give SysKit Insights a try.

SysKit is a software development company based in Zagreb, Croatia. The company was founded in 2009 and is devoted to creating innovative enterprise software solutions for SharePoint, Office 365, Windows Servers, Remote Desktop Services, and Citrix environments. SysKit has developed many quality software products, such as SPDockKit, SysKit Monitor, SysKit Insights and SysKit Security Manager. These products are used by more than 3000 public and corporate customers across the globe.

The best **SharePoint medicines!** SharePoint farm administration is **easier and faster with our tools.**
