Microsoft 365 Governance, Security, and Documentation Solutions

Boost Productivity, Ensure Consistency, and Achieve Compliance

„No self-respecting Microsoft 365 Administrator's toolbox is complete without SysKit."

Todd Klindt, Microsoft MVP

![SysKit Point]

Who is it for?

Microsoft 365 Admins

Gives them good visibility of the Microsoft 365 environment. Helps them govern and report on access, content, and users.

Business Users

Empowers them to govern and manage user access to the resources they own, as well as track the activity of those users.

Auditors

Enables them to evaluate and improve the effectiveness of risk management, control, and governance processes.

Compliance Managers

Helps them follow the necessary rules to comply with government and established company policies.

CSOs

Helps them implement security policies related to the protection of people, intellectual, and tangible assets.

What's in it for you?

Automate Governance

Empower sites, teams, and groups owners to become your trusted governance allies. Schedule automated tasks to manage their users' access and clean up inactive content.

Control User Access

Keep your cloud data safe from malicious actions and breaches. Know who inside and outside of your company has access to what and manage permissions on the fly.

Audit User and Admin Activity

Control user and admin activity and comply with policies such as GDPR and HIPAA. Check the activity on sensitive files and avoid unauthorized access.

Clean up Inactive Content

Keep your tenant clean and your licenses well used. Get usage metrics for each site, group, or team. Detect the most popular sites and receive alerts on inactive content.

Simplify Security Reporting

Generate 20+ security reports based on your access level in Microsoft 365. Drill from user to service focused reports to switch the perspective. Export the reports in PDF or Excel.

SysKit Trace

Who is it for?

CSOs

Helps them comply with business standards by providing a document with configuration settings and a notification system in case of any configuration change.
Microsoft 365 Admins

Helps them document configuration settings of multiple Microsoft 365 services and keep track of changes in their environment.

Cloud Architects

Helps them provide a standardized and repeatable process to deploy new tenants with the correct configuration.

What's in it for you?

Document Your Settings

Generate complete documentation of multiple Microsoft 365 services with a single click. Have it ready as a migration cheat sheet or use it for maintenance preparation.

Detect Configuration Drift

Compare settings between different tenants or in a single tenant through time. Mark correct settings as a baseline for future setups.

Get Alerts When Settings Change

Receive alerts if someone changed configuration settings and make sure your tenant is set up consistently.
