So, what is a Power BI Template App?

A Power BI Template App is a published Power BI solution that can be used by any company that has the data platform for which the Template App was created.

Wouldn't it be nice to pick your entire Power BI Solution off the shelf - one crafted for your specific business needs and your specific data structure. Power BI Template Apps are designed to be such an out-of-the-box solution and this blog post is an example of such for a Power BI Solution for Salesforce.

Inside of [this](#) Power BI Template App you will find all of the necessary elements for creating a simple pipeline model for Salesforce. This template is meant to be an entry level solution for Salesforce and Power BI, showcasing the basics. This Template App could provide a starting point for more advanced reporting.

Exploring and Connecting

Exploring and connecting your data to the template app is simple and intuitive. First [launch](#) the app. You will be greeted with the window is Step #1 below.

If you just want to explore the app with the existing sample data inside select the ‘Explore app’ options. To connect your own data choose the ‘Connect’ option.

When you select Connect, you will be prompted to input your Salesforce credentials to which you would like to connect. Follow those steps and your data will flow seamlessly into the app and you can begin using immediately.

The template app also comes with a workspace so that you can customize and share your changes with others.

STEP #1: This [link](#) will take you to this screen that will confirm you’d like to Install the Power BI Template App for Salesforce.

Create a workspace for installing this app

The default workspace for installing this app is already being used in your organization. A workspace with a unique name must be created for this app. The name should help you identify the app later.

Enter a name for the new workspace

How To Use This Template App

Pipeline Overview

The purpose of the Power BI Template App is to aid your business decisions around your Sales Pipeline. It does this through displaying your Sales Pipeline in various visual ways. This page has two sections and are labeled on the left side of the screen.

Dashboard Northern Hemisphere: includes big picture KPI's for a quick glance including a six month win rate and amount won KPI.

- Total Pipeline in \$
- Total Amount that has hit our Pipeline over the past 6 months

- Expected Sales (Entire Pipeline x Probability of Close for each deal)

Dashboard Southern Hemisphere: shows the predicted pipeline for the next few months and allows you to visualize data through stage names and amounts. You can select to see the probability amounts on the Expected Sales graph to get an idea of what your next few months will look like!

- **Pipeline Staging:** Visualize your entire Pipeline in order of the value attributed to each stage of the sale
- **6 Month Pipeline on the Closing Month, segmented by Stage:** See your predicted close dates for all deals, segmented by their current stage of the sale.

Wrap Up

We've showed you a useful example above but just for a minute, imagine the possibilities for your business.....

Imagine having Cross-Platform / Cross-Business packaged Power BI solutions that can be shelved and automatically deployed by any team member, anytime all while maintaining BI best practices encapsulated in your organizational Power BI Template Apps.
