FIVE REASONS
FOR INTEGRATING

①

SCALABILITY

Cloud environments offer near limitless capacity and processing power. Access the right amount of computing power when you need it and scale it down when you don't.

②

FLEXIBILITY

Cloud computing allows you to try out new technologies faster and cheaper than an internal build; from any location, any time of day.

③

CENTRAL VIEW

By integrating your systems and data, you create a single management view of all data and applications.

④

COST

Cloud eliminates the need for upfront capital expenditure. Integration reveals where cost savings can be made. Businesses using separate HR, Time tracking, Accounting and Payroll software can see whether all these functions can be undertaken by one system and reduce spend on monthly licence fees.

⑤

INCLUSIVE UPGRADES

No more large upgrade projects, the bigger the environment the greater the saving.
