

POWER BI CONSULTING

INSIGHTS THAT EMPOWER ACTION.

GadellNet's Power BI Jump Start delivers valuable information about your business by analyzing data and visualizing key performance metrics. Our consulting team will connect your sales, HR, marketing, finance and executive departments to create a powerful dashboard that presents actionable information so you can confidently make informed business decisions and find new opportunities.

THE TOOLSET

Identified as an industry leader by Gartner for 10 consecutive years, Power BI makes it easy to connect to your data and build web accessible reports and dashboards that can be shared with your team.

THE PROCESS

Our consulting team will engage with your stakeholders as we work through our tried and true, iterative development process. Discover, build, launch.

THE OUTCOME

You'll walk away from our Jump Start engagement with a working BI Dashboard that can be leveraged by your organization to gain actionable insights into your business and make more informed, confident decisions.

YOU CAN ALSO COUNT ON OUR TALENTED TEAM TO DELIVER THE FOLLOWING:

BEST PRACTICE FRAMEWORK. We take a 'Think Big, Act Small' approach to our work. We'll use best practices to configure the solution within your tenant to make sure you can build upon our work.

QUICK ROI. Power BI is the most affordable enterprise level business intelligence platform on the market. It's also the least expensive for small businesses. Uncovering one new insight that drives cost savings or added revenue could be worth years of licensing costs.

PLAN FOR FUTURE GROWTH. Once you realize the value of turning data into knowledge, we're confident that you'll find other areas of your business that could use a nudge. Our BI Roadmap is exactly what the doctor ordered.
