Managing Employee Experience – Workstations, laptops and mobile devices, are simultaneously your employees' most important tool and the weakest link in your security infrastructure; essential for communication and productivity, but an endless drain on your IT department's time.

You know that 90% of damaging cyber-attacks occur through workstations and other employee devices - attacks that the antivirus software relied upon by most device management systems, is failing to prevent. Yet, to apply all recommended security hardening configurations, patches and policies, takes time you haven't got - and your people need their devices available to the maximum extent *and* fully provisioned with the software they need, whenever and wherever they are working.

Balancing security, device uptime, version control and regulatory compliance, has always been a constant, unsolvable headache, and organisations consequently consider it normal to spend 5-10% of revenue funding their IT helpdesks.

UNTIL NOW.

Imagine a scenario where:

- Your organisation's devices are always kept up to date, compliant and actively security-hardened, regardless of their location or operating system.
- New recruits are online and productive in minutes and existing employees can work effectively on any device, wherever they are.
- Endpoints are constantly monitored for security, compliance and app issues, with adjustments being made automatically, remotely, with

A SENIOR DEVELOPER couldn't access their usual machine. They asked to be 'Devicied' a new workstation. **In 30 minutes**, their apps, configurations, personal information and what they were working on, were there on a new device, ready for them to use.

minimal interruption to workflow and without reliance on your intranet.

- Your IT team is freed from endless helpdesk tickets and endpoint security incidents, to focus on new product development and streamlining your organisation's core processes.
- With a couple of clicks, you can see the status and location of your entire endpoint fleet, and print compliance reports to satisfy the most zealous of auditors.

WITH DEVICIE

With Devicie, all this and more is not only achievable but entirely affordable. In fact, given the range of features and benefits included in Devicie, your organisation can hardly afford *not* to use it. User devices are remotely monitored and automatically maintained, directly from the Devicie platform, via any internet connection. No matter where you are, or which hardware or operating system you are using, Devicie is looking after your device and supplying you with the specific apps and settings needed to undertake your specific job role. Devicie is truly a game-changer in endpoint management. Backed by an infinitely scalable, state-of-the-art cloud service provisioning system and by a team of experts unrivalled in their depth of security and compliance knowledge, it is simply the only system you can trust to protect your vulnerable end user devices while simultaneously maximising device availability. It's the only service that truly works across multiple platforms, and it constantly evolves to meet the needs of a growing organisation.

MAINTAINING EMPLOYEE DEVICES

Book an appointment with us today, to find out how much time and money your organisation can save by investing in Devicie. You can reach us on 1300 636 443 or contact@devicie.com

Focus without Fear

Non-IT employees of a Devicie customer were asked what they thought of Devicie and to note any drawbacks they'd encountered. Their answer was: *they hadn't noticed it at all.*

They unanimously agreed this was not the case before Devicie! This is exactly how we want Devicie to work - *in the background and with no interruption to workflow.*
