

Nous Database Migration Accelerator Pack 3-Week Proof of Concept

The Azure DB and Cosmos DB Migration Accelerator pack helps organizations currently using on-premise SQL Server, MySQL, or PostgreSQL to understand and plan data estate migration and modernization to Azure. Using an identified database instance migration to Azure, this engagement will demonstrate the benefits and the value of running databases in Azure.

Migration Phases

Assess and Plan

- Understanding the migration impact and core benefits
- Review of business objectives and technical details
- Build a sequences database migration plan that includes architecture, application connectivity, monitoring configuration, data sync, planning migration testing, and more

Setup Test and Validate

- Configure environments and execute test migration (and test rollback)
- Remediate any issues and validate final migration plan through additional testing

Go-Live

- Execute final database migration cutover and confirm success
- Validate

Optimize and Transfer Knowledge

- Ensure monitoring, management, and cost optimization configuration
- Transfer knowledge to client database support team for ongoing support

Deliverables

Migration approach documentation

- Current database landscape assessment report
- Migration steps

Best practice guide to operate and manage Azure environment

Data validation results report
