Environment Assessment for Cloud Migration

Challenges

Customers who have applications in data centers or on-premise and need support to plan the migration to Microsoft Azure.

Many clients need / want to migrate to Microsoft Azure but don´t know how or where to start, they should have a partner to support from the beginning to the end of their journey.

Solution

Application Assessment discovery in physical, virtual, and cloud environments that assesses Azure dependencies and suitability.

Because Cloud is a technology that the client doesn´t now, it often lacks the technical knowledge needed to map applications that are cloud-ready and those that need to be resized, in addition to the required integrations.

Outcomes

Customers are looking for specialized cloud partners with the expertise to ensure seamless migration to the cloud.

Many customers don´t adopt cloud technology due lack of experience, so they don´t feel comfortable.

Dedalus Cloud Assessment + Microsoft Azure

Application Mapping Assessment, Migration Plan and Cloud Architecture

Application Analysis

- Environment Assessment
- Application Analysis
- Application Integration Mapping

Migration Plan

- Migration Application priorization
- Migration Plan Schedule definition
- Risk Analysis

Cloud Architecture

- Cloud Architecture designed by Dedalus Specialists.

Our experts ensure deep analysis of the environment and applications for rapid migration and full adoption of Azure.
