Siebel on Azure
Let us define your Siebel's Journey to Azure

Siebel CRM continues to be a preferred and comprehensive CRM platform for many organizations and is not an easy proposition to move to SaaS. While effective, Siebel systems typically are hosted on expensive infrastructure that requires redundancy and performance.

Siebel CRM on the Azure provides enterprises with flexibility, scalability and freedom to operate in an optimum manner. Scale your infrastructure to cater for seasonal traffic on the go.

HOW IT WORKS

We conduct a one-week assessment where we will analyze your Siebel System along with the overall architecture of applications in connection with it. We will define a value proposition for the migration to Azure and will document a migration strategy, and suitable execution plan.

BENEFITS

- On Demand Infrastructure – Scale and Pay as required
- Reduced Infrastructure maintenance costs
- Leverage multi-factor authentication services
- End-to-End Data Encryption
- Business Continuity – Redundancy built-in
- Reduction in incidental costs

OBJECTIVES

Siebel Migration Readiness Assessment

- Establish a value proposition for migration of Siebel to Azure.
- Estimate a three-year ROI.
- Prepare a migration strategy
- Build the execution plan
- Define TO-BE infrastructure resource requirements including compute, network, storage and security.

DELIVERABLE

- Business Case and 3-year ROI
- System Architecture
- Microsoft Azure cost calculations
- Migration strategy
- Execution Plan

COST

Our seasoned Siebel and Azure Architects will work with your functional and technical teams over a course of one week.

The service cost for the deliverables is **$10,000**
