Microsoft Azure
IoT Central Implementation

A Fully Managed SaaS Solution Implementation for Connected Assets

Start steering value from your IoT investments using an IoT solution that does not require deep cloud development expertise.
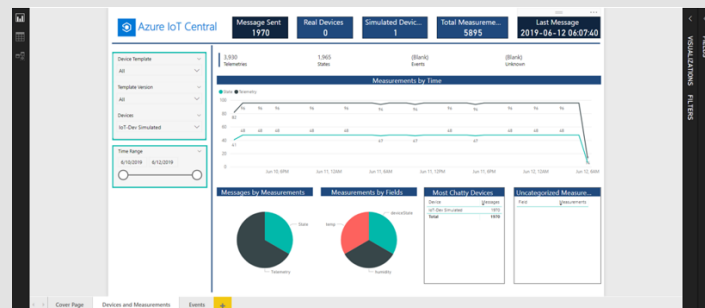

With Azure IoT Central, we can help you implementing the solution to remotely monitor your key business assets. With built in visualizations, you can capture insights for operational trends and problem analysis to act accordingly.

Consume device data and apply predictive analytics to predict the asset maintenance and avoid significant downtime which can impact productivity and revenue.

Make intelligent decisions about your business assets by having more useful insights using Microsoft Power BI dashboards. Keep updated about where you asset are and to predict maintenance or replacement is critical to the economic success of your organization.

Automate your business processes by integrating with your line of business applications by applying certain rules on device telemetry and take actions into the business application.
