

Get up and running quickly with an Azure IaaS JumpStart from Insight.

Take the next step in your cloud journey

The pace of business today demands that organizations become more flexible and responsive. One way to do this is by transitioning to a service-oriented IT model, reducing hardware investments and CapEx over time. Microsoft® Azure® Infrastructure as a Service (IaaS) lets you take advantage of cloud resources as you need them, leaving you with only software and application management. It's an attractive approach to more scalability and cost-efficiency.

Whether you're confidently cloud-first or have just gotten started on your cloud journey, an Azure IaaS JumpStart lets you quickly deploy a working Azure IaaS environment that's secure and suited to your business needs.

What is a JumpStart?

Insight JumpStarts are on-site, expert-led workshops that combine training and implementation. Centered around best practices for cloud and security, JumpStarts familiarize your team with new technology and provide you with a working environment you can begin using right away.

How does the Azure IaaS JumpStart work?

1. Our Microsoft experts train your staff on the features and functionality of Azure infrastructure, focusing on how to implement and operationalize.
2. Through whiteboarding sessions, we design your implementation based on current and future requirements, as well as security best practices.
3. We build a secure Azure IaaS environment for you by:

Establishing a cloud-based identity.

- Domain controller replicated with your on-premises environment
- Training and implementation of Role-Based Access Control (RBAC) and ownership

Creating connectivity.

- Establish site-to-site VPN to on-premises data center

Implementing and configuring cloud security best practices.

- Creation of resource groups, Vnets and network security groups

The result

Your team will leave the JumpStart with a solid understanding of Azure IaaS and a secure environment ready for workload migration.

Accelerate transformation with Azure

The cloud offers a better way for businesses of all types to address the growing needs of customers in a modern digital economy. In fact, organizations overall run 79% of workloads in public or private clouds, including cloud-enabled virtual environments.¹ The move away from traditional IT infrastructure will come with a new host of IT constraints and concerns.

The right partner can help you maximize the benefits of the cloud and get you up and running quickly.
