# SEIDOR SAP Cloud

The growth of businesses and their corporate data managed in SAP, require, more than ever, **agile infrastructures** capable of providing computing, storage, data integration and analytics. The solution: Azure business services.

Seidor proposes outsourcing SAP systems in Azure, building service layers to meet the needs to provide **infrastructures** as a service, for **operation**, administration and specialized monitoring of the same, and the **maintenance** and administration needs of the SAP BASIS layer.

Tailored to each customer's requirements, we can offer various services based on the recommendations and certifications both of Azure and SAP, which range from implementation of SAP infrastructures as a project (All-in-One with traditional databases, S/4 with HANA database, SAP Business One with SQL or HANA), up to **total service outsourcing**, and personalized DR (Disaster Recovery) services or implementation of other SAP applications such as Hybris, Business Objects, etc...

For this we have a **totally flexible Azure infrastructure** with a guaranteed SLA, which provides virtual servers certified by SAP and platform **managed services** that enable **continuous monitoring, with corrective and on-demand services** both for operating systems and the SAP solutions, use of backups, archiving and DR processes.

Seidor technology to boost your business	**Data Center Infrastructure**	. Azure (Microsoft public cloud) . Virtual servers certified by SAP . Infrastructure with guaranteed SLA
	+	
	Platform (Managed Services)	. Management and monitoring of virtualized platform . Management and use of backups . Administration of the operating system
	+	
	SAP (Managed Services)	. SAP system base service (continuous monitoring, corrective monitoring, on-demand service) . SAP system administration service . SAP system preventive service

SAP advantages in Azure

- **Pay-per-use.**
- **Flexibility, scalability and performance.** Possibility to grow/reduce the infrastructure quickly.
- **Security** and compliance with the strictest regulations, including **GDPR**, ISO 27001, SOC 1, SOC 2...
- **99% SLA** for the whole SAP platform guaranteed under contract.
- Virtual servers **certified** by SAP.
- Facilitates **continuous remote monitoring.**
- **Integration** with backup, archiving and DR services.
- Checking of **recovery plans**, with no impact on daily operations.

Keys of the Seidor SAP Cloud Service
