Azure Cloud Readiness Assessment

KCOM

## Assess your readiness for cloud adoption

KCOM's Cloud Readiness Assessment is designed for organisations who are either new to the cloud or have taken their first steps towards cloud adoption.

As a Microsoft Gold Partner we help many organisations adopt public cloud. A common finding is that although it can be quick to get started with Azure, getting it right, in a way that is manageable and scalable, can be challenging.

Our Cloud Readiness Assessment is designed to help organisations overcome these challenges. We assess where you are at on your cloud journey and review against the factors that lead to a successful cloud adoption.

We work with you to:

- Review and assess objectives and plans for cloud adoption
- Review organisational alignment for cloud
- Identity gaps in terms of capabilities and skills for cloud adoption
- For organisations who have started their cloud adoption we review the approach you have used against cloud best practices

Benefits of KCOM's cloud consultancy services:

- We understand the business and technical factors that make cloud adoption successful

- We bring our experience from the complete cloud life-cycle – we plan, build/migrate and run cloud

- We apply our 5 Pillars of Azure Best Practice to everything that we do

Deliverables

On completion of the assessment we present our findings from each of the above areas. We also make recommendations and suggestions for next steps. This presentation is created in such a way that it can be shared and referenced between business and technical stakeholders.
