

Federal Landing Zone Workshop

Create a plan to quickly deploy cloud infrastructure in Azure

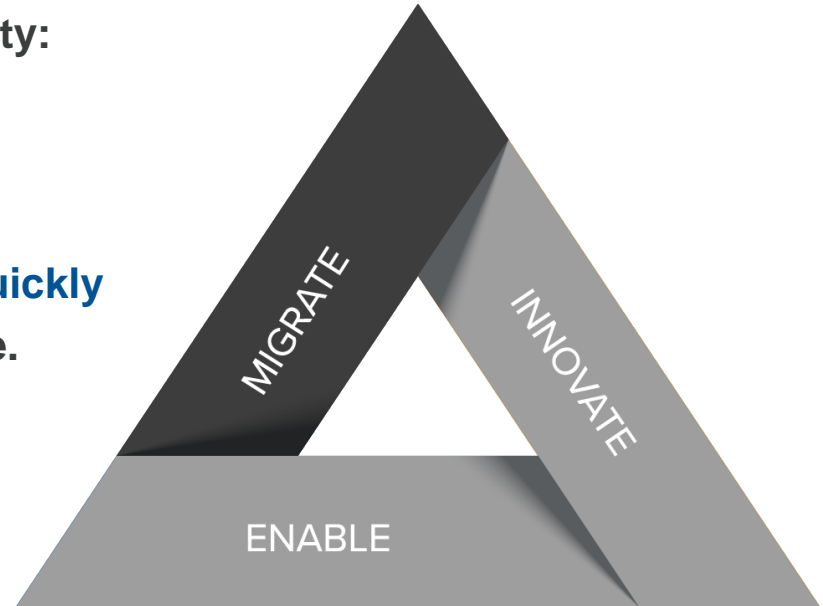

Cloud Transformation Lifecycle

Cloud transformation has 3 stages of maturity:
Migrate, Innovate, and Enable.

AIS' **Landing Zone Implementation** helps organizations **deploy cloud infrastructure quickly** to begin **migrating** and **modernizing** in Azure.

The next phase, **Innovate**, is where you begin to realize the true impact of **Cloud-Native** development.

Workshop Agenda

AIS' 1-day workshop provides you with and understand and path forward for implementing a secure and scalable cloud infrastructure to migrate and modernize applications.

Education

Discuss best practices for deployment of core infrastructure components (networking, identity, access, connectivity, etc.) to support workload migration. Review operational best practices for monitoring and management once live.

Planning

Establish migration goals and objectives to define a high-level plan for a Landing Zone, incorporating best practices and approaches outlined in the AIS Cloud Delivery Framework.

Get Started

Ready to kickstart your cloud journey?

1. Contact AIS today at **sales@appliedis.com**
2. We'll follow up with more information to help you determine the next steps in **moving forward with a workshop**
3. This will help define the project scope to move forward
