VIRTUAL WORKPLACE

Business Resilience

Practical solutions to move your IT systems to run anytime, anywhere

May 2020
The shift to working from home brings questions and challenges:

- How do I keep confidential data from being left on personal devices?
- How do I give employees access to critical on-premises apps from home?
- How do I protect employees from increased phishing attacks?
- How do I make sure the devices my employees use are secure?
- How do I keep confidential data from being left on personal devices?
Many businesses have strict compliance requirements and stricter NDAs. They must ensure that data is always protected.

- **Business Continuity**
  Business want to enable their employees to work from any where and on any device with same or if possible greater levels of productivity.

- **Security**

- **Cost**
  The investments during a crisis for Work-from-Home must be optimized to provide benefits even and after during normal operations.
What is Virtual Workplace?

Physical office

Internet

Virtual Workplace

Your staff at Home or Anywhere!
What do you get?

**Business continuity**
There is no dependency on your office premises being accessible, and it's Internet or server being on all the time.

**Scalability**
Rapidly scale up and down depending on your business needs. Deploy infra resources during peak seasons or deploying branch offices.

**Flexibility**
This workplace of the future is mobile, visual and secure. It can be delivered virtually to every end user, even those without a PC.

**Cost control**
Pay for only what you use through monthly or yearly subscription models. Reduce capital expenses and enjoy more predictable operational expenses.

**Security**
You fulfil your compliance requirements. You can monitor work and at the same time be safe from hackers. You minimize chances of threats and failures both
