predica.

Adapt to ever-changing technical demands
Set your best solutions free with DevOps practices

Why should your organization adopt DevOps practices for project development?
It allows to effectively respond to continuously changing market requirements.

With **DevOps** practices your teams will be able to collaborate effectively,
create and deploy higher **quality solutions**,
and respond appropriately to **changing client requirements**.

Achieve more in less time through:

shorter time to market

lower failure rate

shorter lead time between fixes
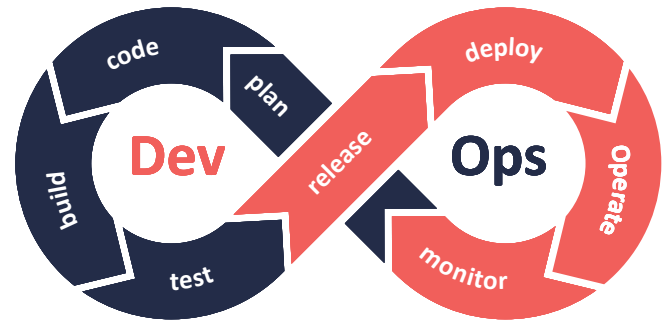

shorter mean time to recovery

Start your journey into Agile delivery and DevOps today.

Your way into the DevOps world!

DevOps Kickstarter

We can help your people adopt the Agile method of working and delivering projects in line with DevOps principles.

As a result of this engagement, you'll begin to see smoother collaboration between various teams, higher security of releases and better quality end products.

Our DevOps Kickstarter is structured into two phases: initial DevOps Workshop and Joint DevOps work, resulting in a DevOps-enabled team:

Initial DevOps workshop

- Maturity assessment
- Kickstarter workshop

Joint DevOps work

- Business workshop
- Technical workshop
- Knowledge transfer
- CI/CD pipelines

DevOps enebled team

- Cross-disciplinary team
- Template project available for other applications
- DevOps awareness

During this engagement, your people supported by our experts will:

- Asses your organization's maturity in DevOps during the initial workshop
- Define a project with a releasable scope, which will be deployed to production

- Define a project backlog and establish a process of managing it
- Work on implementing Scrum and DevOps practices
- Deliver the agreed product to production with a full CI/CD pipeline.

| Envision | → | Initial workshop | → | Define project | → | Deliver product | → | Final workshop |
