Migration strategies: Rehost app (lift & shift)

	What is it?
Rehost (lift and shift)	Redeploy an existing application to a cloud platform without modifying its code
Refactor	The application is migrated "as is", which provides baseline cloud benefits without the risk or costs of making code changes
Rearchitect	
Rebuild	**Example** Move a line of business application to Azure VMs

Founded in 2000, Seepath is a Microsoft managed Direct Cloud Solution Provider.

Gold Cloud Platform Partner and winner of 2015 Microsoft SMB East Rising Star of the year award

SEEPATH SOLUTIONS® help customers with Azure assessment, planning, design, migration and managed services to help them *move, operate and innovate* in the cloud.
SEEPATH SOLUTIONS® delivers breadth of App, Data and Infrastructure modernization solutions, DR, and Azure Managed Services (AMS) for Financial Services, Health Care and Manufacturing verticals.

Customer spotlight

"When you experience periods of sudden growth through **acquisitions**, like Allscripts has, you need a flexible cloud partner like Azure.

Tools like **Azure Site Recovery** have helped us migrate several hundred business critical workloads —including **Linux, MySQL, Windows, SQL Server,** in a weekend - more **quickly, reliably, and securely** than we could ever before."

"Moving to Azure has helped us keep pace with our **business growth and increasing customer expectations.**

We were able to **migrate and modernize several critical Linux, Windows and Java applications** to Azure while continuing to run on-premises operations, thanks to Azure hybrid capabilities.

Microsoft **met us where we were** at and helped us achieve significant business transformation in months, instead of years."

"Chevron has always seen technology as a differentiator, but the cloud enables us to deliver value to the **business so much faster.**

As we **migrate thousands of applications to Azure, we are taking the opportunity to modernize. Re-writing applications and taking advantage of Azure platform services while using an automated code pipeline** is what will give us the **speed to enable digital in the future."**
