

# Nexio Cloud Files

Powered by  Microsoft Azure

“Host file shares in the most secure and scalable cloud available”

- Reduce storage cost
- No CAPEX required
- Scale at will
- Flexible pricing model

A quick win with tangible value

### WHAT IS Nexio Cloud Files?

An implementation of Azure Files and migration of your file share content

File Servers have long been core to collaboration within most enterprises. While Microsoft SharePoint Online and OneDrive for Business have become popular alternatives, many systems and processes still rely on good old fashioned file shares. But how does an organization leverage the pay-as-you-go pricing, scalability and redundancy that the cloud has become known for while maintaining file shares?

Azure Files offers fully managed cloud file shares that you can access from anywhere via the industry standard Server Message Block (SMB) protocol. Azure file shares can be mounted from cloud or on-premises deployments of Windows, Linux, and macOS.

### What's in the box?

- ✓ A detailed planning workshop
- ✓ Configuration of an Azure Storage account and associated security best practices
- ✓ Migration of max 5GB of file share content

### What's extra?

- Migration of additional file share data
- Restructuring of file share directories
- Allow us to quote on network capacity to Azure
- Managed Services to monitor and maintain your Azure File Shares
- Configuration of Azure Monitor and notifications related to Azure Files
